Summary

Food & Beverage	The global ramen retail market is forecast to grow at a CAGR of +4.7%, from USD 51.5 billion in 2025 to USD 56.4 billion in 2027F, but China, which accounts for one-third of the market, is stagnant, and growth occurs outside Asia. The U.S. ramen market grew 2.2 times, from USD 1.75 billion in 2020 to USD 3.93 billion in 2025, and its size relative to pasta has risen from 0.51x to 0.93x. In 2025, the combined U.S. ramen share of Nongshim and Samyang Foods was 43.8%, surpassing Maruchan (34.1%) for the first time, and the two Korean companies filled 87% of the USD 610 million market increase. We estimate 2027 ramen exports at USD 2.09 billion (+10.4%) in the Base case and USD 2.21 billion (+16.6%) in the Bull case, and the global share of the four Korean companies is expected to expand from 11.7% in 2025 to 14.3% in 2027. We forecast that the 2027 domestic food and beverage retail sales current price index will grow by more than +4%, with ASP +3% and volume +1% or more.
Cosmetics	Cosmetics is in a phase in which export growth is re-accelerating. Cosmetics exports in January~September 2026 were USD 11.14 billion (+30.8% YoY), nearly reaching full-year 2025 exports in nine months, and surpassing USD 15 billion for the full year is within sight. We estimate 2027 cosmetics exports at USD 17.8 billion (+19.3%) in the Base case and USD 19.3 billion (+29.2%) in the Bull case. The basis is diversification. The 2021~2025 CAGR of the three major regions of the U.S., Greater China and Europe was -0.9%, while all other regions grew +18.9%, and the number of export destination countries rose to 202. Contributions to 2027 growth are, in order, Europe 6.4%p, Others 4.5%p, Middle East/CIS/Latin America 3.3%p, U.S. 2.9%p and Greater China 0.4%p, so 19% growth is possible even if Greater China stays at the prior-year level.
Investment View	We maintain the Positive industry rating on food & beverage and cosmetics for 2027, and present Samyang Foods and Cosmax as top picks. For Samyang Foods (target price 1,800,000 KRW), we forecast 2027 revenue of 3,955.2 billion KRW (+28.1%) with the start-up of the new Jiaxing plant, and we expect utilization to exceed 100% in China in 2028 and in Korea in 2029, so that a decision on an additional new plant investment within the year and discussions of an additional plant investment in China are likely to take place. For Cosmax (target price raised to 370,000 KRW, +23%), we expect that, with 2027 revenue +20.8% and operating profit +25.7%, not only the growth of the Korean entity but also the high growth of the overseas subsidiaries in China, the U.S. and Southeast Asia will drive overall earnings and valuation re-rating.

Food & Beverage

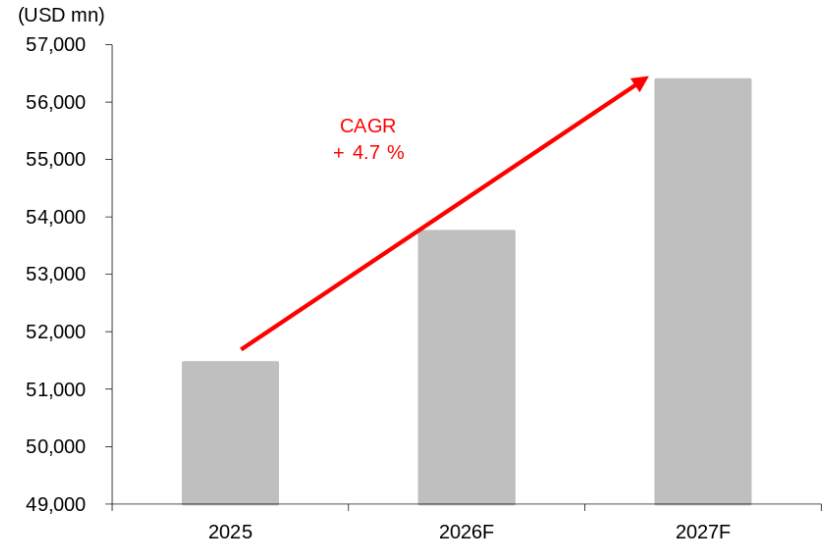

Global Korean Ramen Share Forecast at 14%

2027 Outlook: Food & Beverage / Cosmetics

Global Ramen Market, Where the Axis of Growth Is Shifting (1)

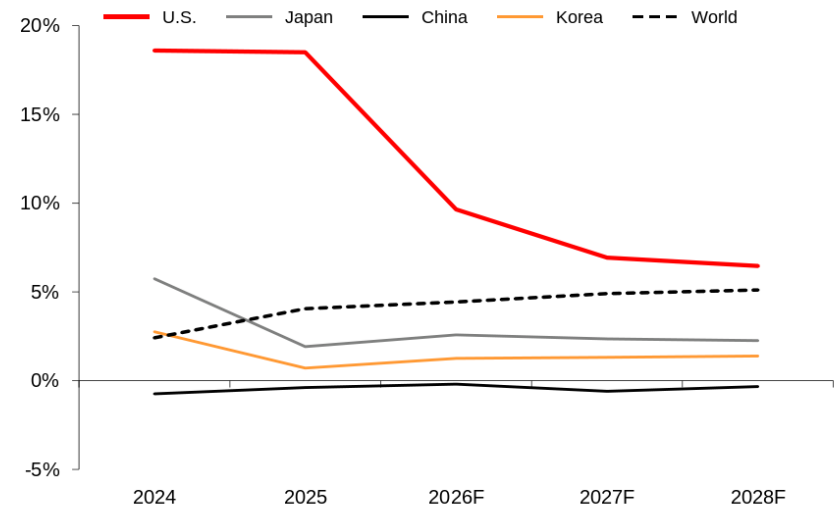

- Based on Euromonitor, the global ramen retail market is forecast to grow at a CAGR of +4.7%, from USD 51.5 billion in 2025 to USD 56.4 billion in 2027F
- Even as a mature category, it is a structure in which a market of more than USD 2 billion is newly created every year
- However, China, which accounts for one-third of the market, is stagnant at a CAGR of -0.4% (CNY basis) over 2025~2027F
- Japan also grows only +2~3% a year, so the growth contribution of the two major mature markets is effectively 0
- Growth occurs outside Asia, the mature market
- The U.S. grew at a CAGR of +17.5% over 2020~2025 and accounted for 23% of the global increase (share 4.2%→7.6%, 8.4% in 2027F)

Global Ramen Market Size

Ramen Market Growth by Country vs. World

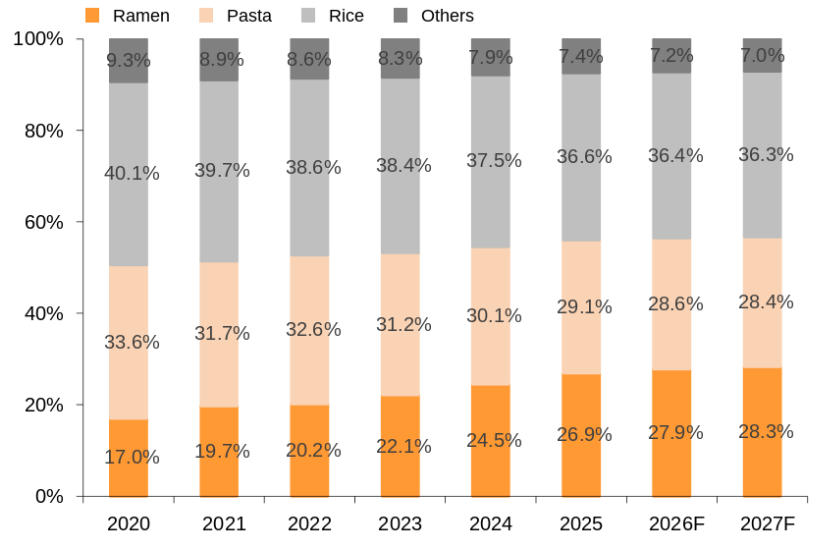

Source: Euromonitor, Hanwha Research Center

Global Ramen Market, Where the Axis of Growth Is Shifting (2)

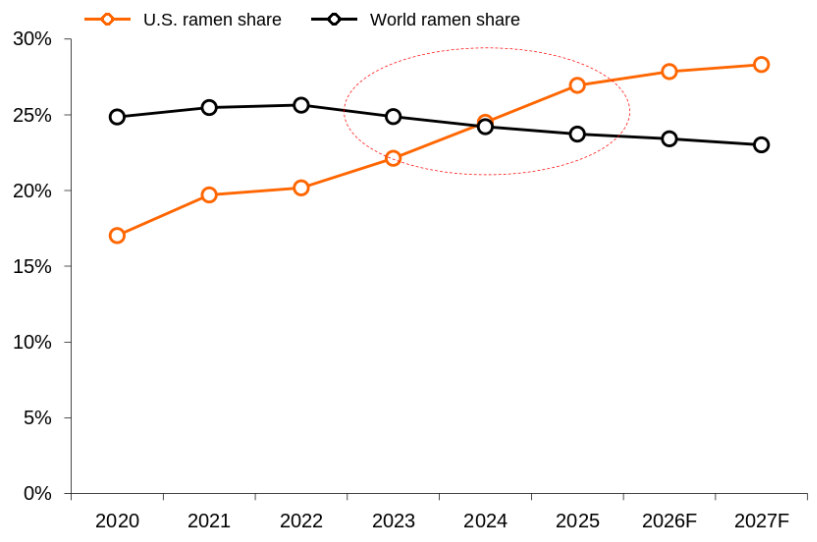

- Ramen's share of the U.S. rice, pasta and noodles market expanded from 17.0% in 2020 to 26.9% in 2025, and is forecast at 28.3% in 2027F
- On a World basis, ramen's share instead declined from 24.9% to 23.7% over the same period
- This is because ramen in mature Asian markets such as China is stagnant while pasta in emerging markets is growing
- The category expansion of ramen is led by Western markets
- If the U.S. is a leading indicator, Europe will become the main driver of growth

U.S. Rice, Pasta and Noodles Category Mix

Source: Euromonitor, Hanwha Research Center

Ramen Share: World vs. U.S.

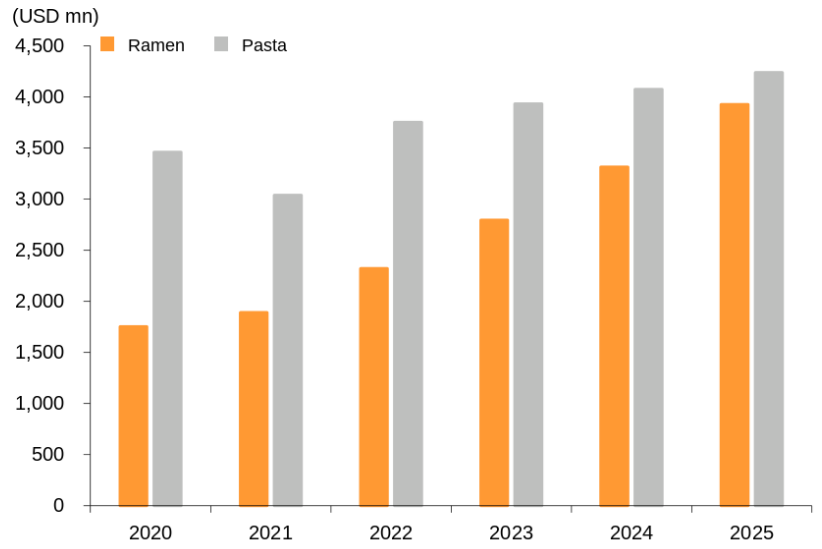

Source: Euromonitor, Hanwha Research Center

Ramen in the U.S. Catching Up with Pasta

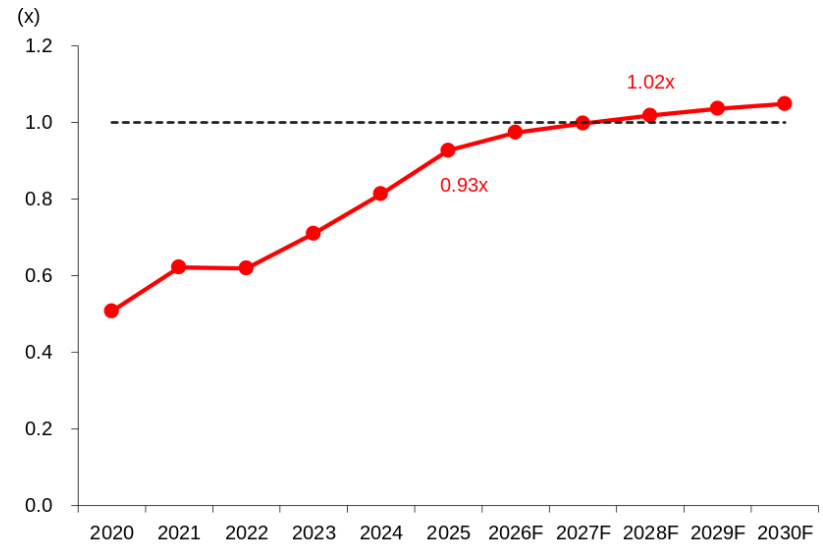

- The U.S. ramen market grew 2.2 times in five years, from USD 1.75 billion in 2020 to USD 3.93 billion in 2025
- Over the same period, the pasta market grew only +23%
- The U.S. ramen market is forecast at USD 4.31 billion in 2026 (+9.6%) and USD 4.7~4.8 billion in 2027 (+10~11%)
- The size of the ramen market relative to pasta rose from 0.51x in 2020 to 0.93x in 2025. A reversal is forecast in 2027
- Ramen is no longer a convenience meal for Asian consumers but a category that competes on the same shelf as pasta as a noodle dish option for American households

U.S. Ramen vs. Pasta Market Size

Source: Euromonitor, Hanwha Research Center

Ramen-to-Pasta Market Size Multiple

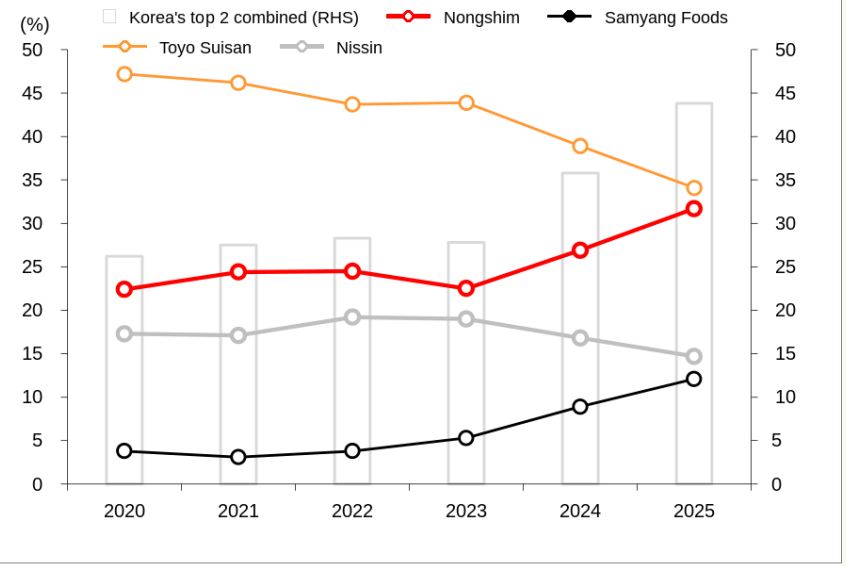

Source: Euromonitor, Hanwha Research Center

U.S. Ramen Market Growth Led by Korea

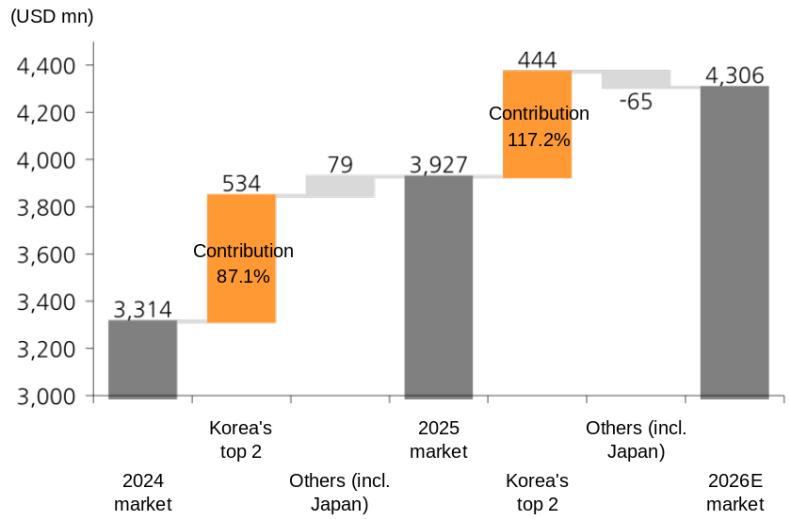

- The 2026E U.S. ramen market is forecast at USD 4.31 billion (+9.6% YoY). Over the same period, Korean ramen exports to the U.S. grew +25.6% in January~September, 2.7 times the market growth rate
- The 2026E combined share of the two Korean companies (Nongshim and Samyang Foods) is estimated at around 50%. Rising for a third consecutive year after 35.8% in 2024 and 43.8% in 2025, it overtook Maruchan (34.1%) in 2025
- Of the USD 610 million market increase in 2025, about 87% was contributed by the two Korean companies (Nongshim +40%, Samyang Foods +61% vs. Maruchan and Nissin +4%). The growth of the U.S. ramen market is the growth of Korean ramen
- The key point is that spicy flavors, premium bagged ramen and K-content changed a market structure that had been centered on low-priced cup ramen

U.S. Ramen Market Share by Company, 2020~2026E

Note: 2026E company figures are our estimates. Company sales are on an RSP basis.
Source: Euromonitor, Korea Customs Service, Hanwha Research Center

Contribution to U.S. Ramen Market Growth (Korea vs. Japan vs. Others)

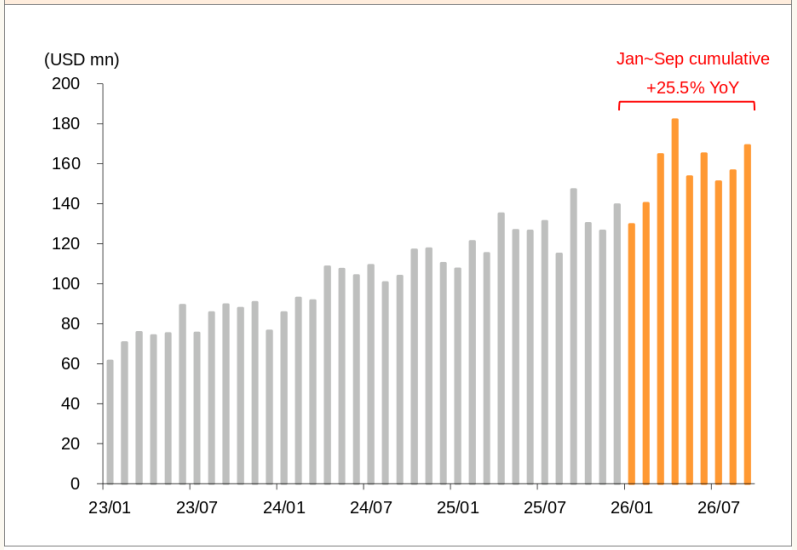

Source: Euromonitor, Korea Customs Service, Hanwha Research Center

Notable Share Gains by Korean Companies

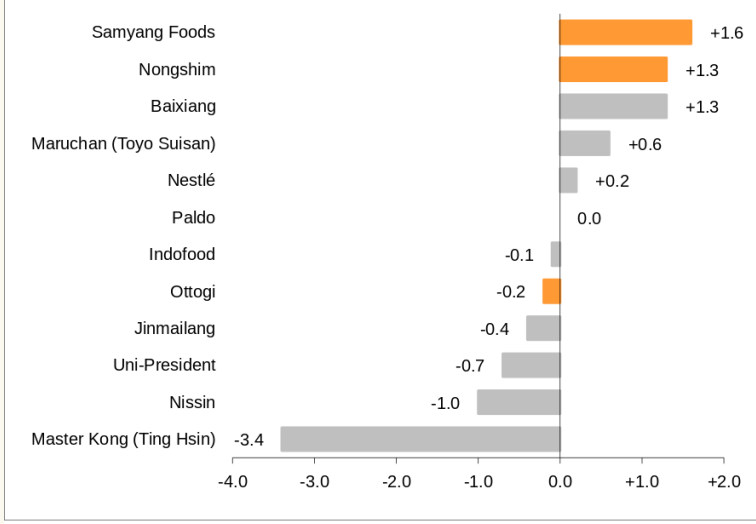

- Korean ramen exports in January~September 2026 were USD 1.41 billion (+25.5% YoY), 6 times the global ramen market growth rate (+4.4% in 2026E). Growth slowed to +15.0% in September, but because of the difference in the timing of the Chuseok holiday (October 2025 → September 2026), growth for October 1~10 reached +74.7%
- Over 2020~2025, global share changes were Samyang Foods +1.6%p and Nongshim +1.3%p, the largest and second-largest gains among the top 12 companies (China's Baixiang +1.3%p, tied). Over the same period, top companies in Greater China and Japan, such as the No. 1 company Master Kong (-3.4%p) and Nissin (-1.0%p), all declined
- The decline of the top companies is the result of stagnation in the Chinese market, and Korea's rise is the result of expansion into non-Asian markets such as the U.S. and Europe. This means that the agent of growth is changing within the same market
- Because the growth of Korean companies lifts the market itself, we judge that the growth rate of the 2027 ramen market will depend on the supply expansion of Korean companies

Korean Ramen Exports by Month

Source: Korea Customs Service, Hanwha Research Center

Change in Global Ramen Share of Major Companies (2020→2025)

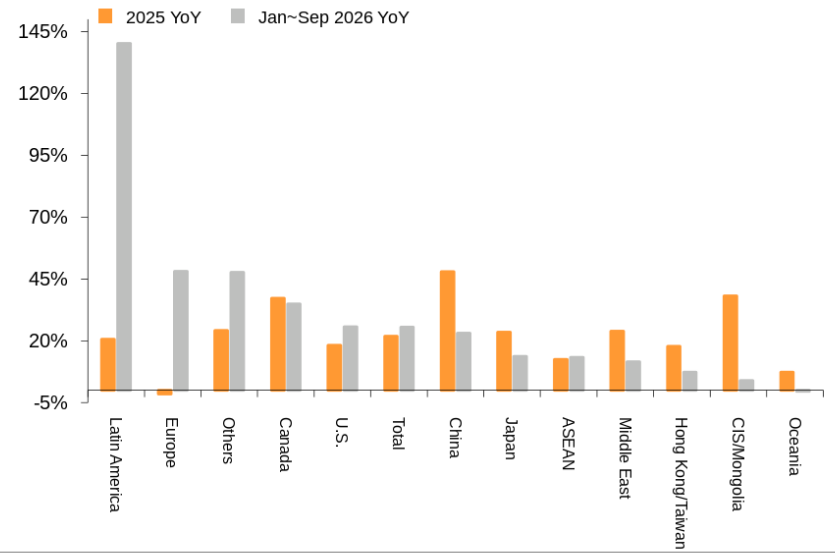

Source: Euromonitor, Hanwha Research Center

Europe Is the Next U.S.

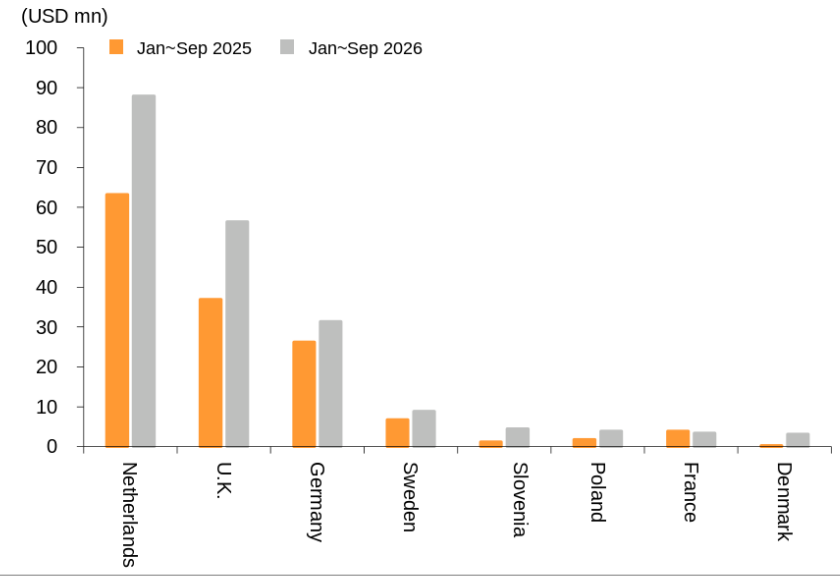

- Ramen exports to Europe in January~September 2026 were USD 225 million (+48.1% YoY), twice the overall growth rate (+25.5%). Reversing from -1.6% for full-year 2025 within a year, the share of 15.9% is approaching that of the U.S. (17.3%)
- By country: the Netherlands USD 87.9 million (+39%, logistics hub), the U.K. 56.4 (+53%) and Germany 31.4 (+20%), in that order. Nongshim's European subsidiary's 1H26 revenue was 80.3 billion KRW, showing a clear increase in quarterly revenue
- It is a structure in which Europe follows, with a two-to-three-year lag, the path the U.S. took over 2020~2025 (ramen/pasta 0.51x→0.93x)
- Demand has been confirmed, and the remaining variable is supply

Korean Ramen Export Growth by Region

Source: Korea Customs Service, Hanwha Research Center

Ramen Exports to Europe

Source: Korea Customs Service, Hanwha Research Center

Supply Starts to Increase in 2027

- As demand has been confirmed, the remaining variable is supply
- In particular, 2027 is the year in which completions of overseas capacity in the food and beverage industry are concentrated
- Samyang Foods' China Jiaxing plant starts operation in 1Q27 (annual 1.13 billion servings, total capacity +40%)
- Nongshim's Noksan export-dedicated plant starts operation in October 2026, expanding export capacity from 700 million to 1.2 billion units
- Because the variable was supply rather than demand, it is worth noting that this is the first year in which the upper limit of growth is lifted

Overseas Capacity Completion Schedule by Company

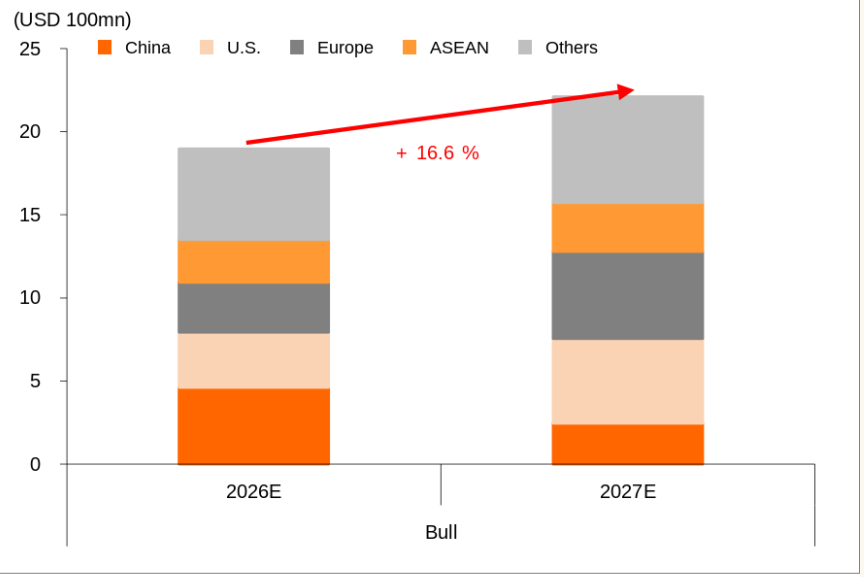

Company	Project	Investment (KRW 100 million)	Completion/Start-up	Capacity
Samyang Foods	Jiaxing, China	2,072	1Q27	Lines 6 → 8, annual 1.13 billion servings (total capacity +40%)
Nongshim	Noksan export-dedicated	1,918	Oct 2026	Export capacity 700 million → 1.2 billion units
CJ CheilJedang	Hungary	1,000	2026H2	-
CJ CheilJedang	Sioux Falls, U.S.	7,000	2027	-
Orion	Jincheon Integrated Center	4,600	2027H2	Domestic revenue basis KRW 1.9 → 2.3 trillion
Orion	Tver, Russia	2,450	2027H2	16 lines
Hite Jinro	Thai Binh, Vietnam	1,350	2027	Initial 1 million → maximum 5 million boxes
SPC	Texas, U.S.	2,900	2027 (Phase 1)	-

Source: Companies, press reports, Hanwha Research Center

2027 Global Korean Ramen Share Forecast at 14% (1)

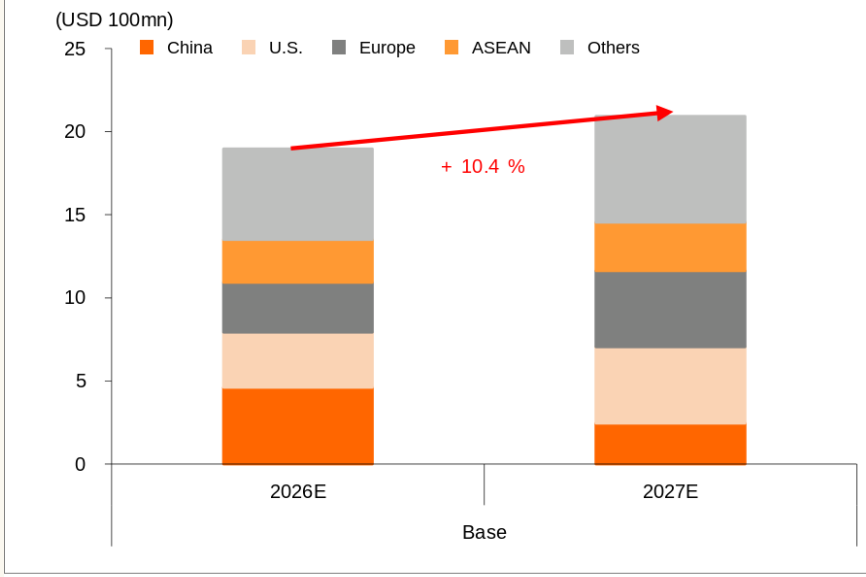

- Korea's 2026 ramen export value is estimated at USD 1.90 billion (+24.6% YoY): by region, China USD 460 million (24.3% share), the U.S. USD 330 million (17.6%), Europe USD 300 million (15.8%), ASEAN USD 260 million (13.6%) and Others USD 540 million (28.7%)
- Under the Bull scenario, in which, with Samyang Foods' shift to Jiaxing, China, the U.S. and Europe fill all of the remaining Korean capacity, Korea's 2027 ramen export value is expected at USD 2.21 billion (+16.6%)
- The basis is the assumptions that 1) in 2027 Samyang Foods' exports to China fall -68% while the U.S. grows +55%, Europe +87% and ASEAN/Others +10%, so that Samyang Foods' combined exports grow +9.8%, and 2) Nongshim's exports also grow +30% from the effect of its Noksan export-dedicated plant starting operation
- Under the Base scenario, Korea's 2027 ramen export value is expected at USD 2.09 billion (+10.4%)

2027 Global Korean Ramen Share Forecast at 14% (2)

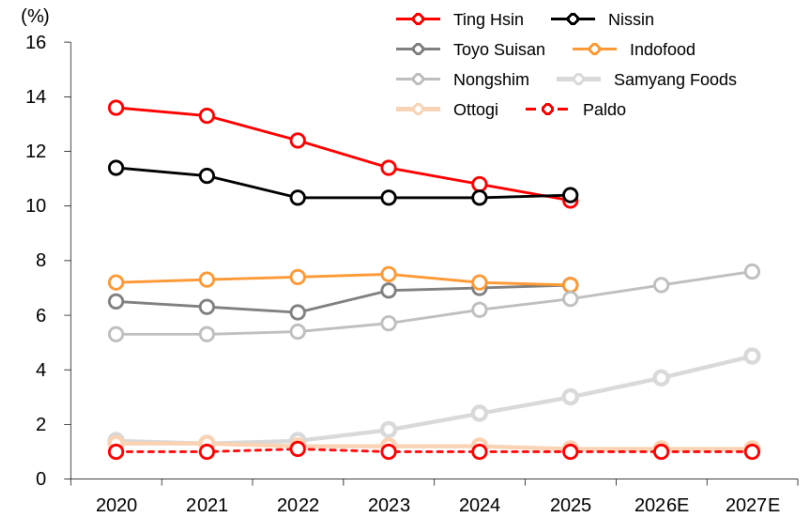

- Compared with the 2025 average, wheat prices are up +28% and palm oil prices +10%, so a 2027 ramen export price increase is likely
- Assuming a +7% export price increase in 2027, 1) under the Bull scenario the dollar export growth rate is +24.7% and the won export growth rate is +17.8%, and 2) under the Base scenario the dollar export growth rate is +18.1% and the won export growth rate is +11.6%. The price increase can offset the exchange rate effect (KRW/USD 1,429 won → 1,350 won, -6%)
- Applying growth assumptions to 2025 RSP sales by company, the global share of the four Korean companies is 11.7% in 2025 → 12.9% in 2026E → 14.3% in 2027E. The +2.6%p over two years is the same as the five-year rise over 2020~2025 (+2.7%p). The premise is growth of the four Korean companies faster than the market (+4.9% in 2027F), and the figure adds the local production of Samyang Foods' Jiaxing plant and Nongshim's U.S. plant to the export forecast (Bull +16.6%)

II

Food & Beverage

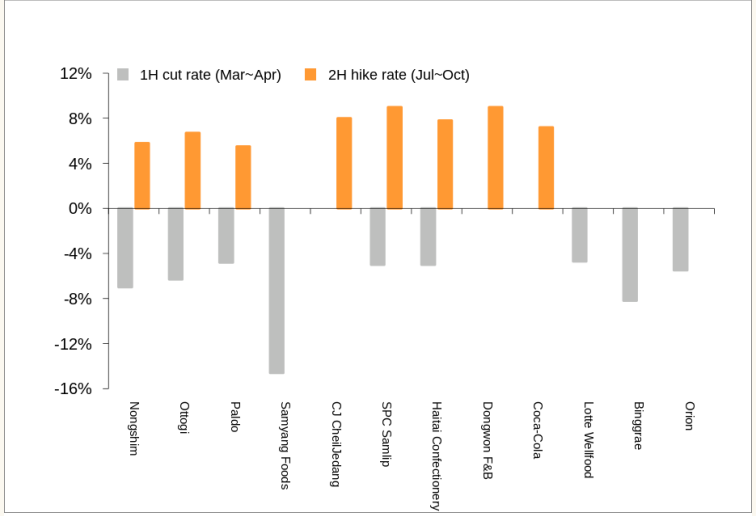

P Rather Than Q

2027 Outlook: Food & Beverage / Cosmetics

A Price Increase Rally Set to Resume

- In March~April 2026, in line with the government's price stabilization stance, ramen, confectionery and ice cream makers announced and implemented price cuts on some products. The average cut rate for targeted products at the four ramen companies was 4.8~14.6%, but major products such as Shin Ramyun, Jin Ramen and Buldak Ramen were excluded, so the scope of the cuts was limited
- Starting with CJ CheilJedang in July (Hetbahn/dumplings +8%), increases spread to all categories: in August Nongshim (cup ramen/snacks +5.8%) and Coca-Cola (+7.2%), in September Ottogi (cup ramen +6.7%), Paldo, Samlip and Dongwon, and in October Haitai (+7.8%) and Woongjin
- Processed food CPI rebounded from +1.5% in August to +2.1% in September. Because the increases are concentrated in July~October, only part of them is reflected in the 2026 average and they are fully reflected in 2027, and the 2027 carry-over effect of the major increases is estimated at +3~6%p, 50~75% of the increase rate
- Nongshim bagged ramen, Samyang Foods (frozen since November 2022), Orion, Lotte Wellfood and Binggrae have not yet raised prices and retain room for increases in 2027. Premiumization, which continues even after increases resume, is the second pillar

2026 Food Company Price Adjustments: 1H Cuts vs. 2H Hikes

Note: Average of announcements by each company. Samyang Foods, Orion, Lotte Wellfood and Binggrae have no 2H hike (as of early October).

Major Price Increases in 2H 2026

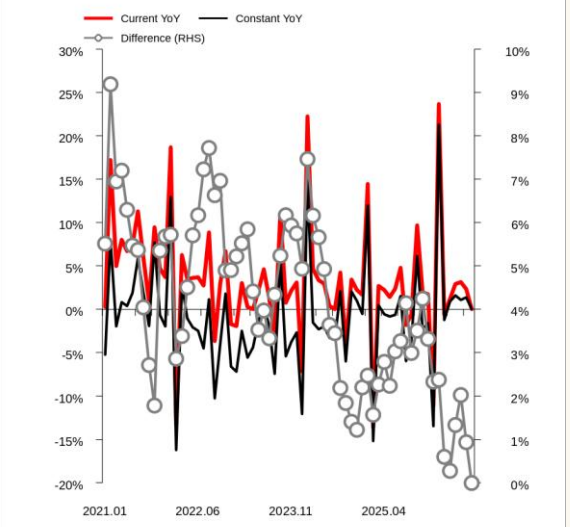

Company	Items	Increase Rate	Effective	2027 Carry-over
CJ CheilJedang	Hetbahn, dumplings, etc. (27 items)	+8.0%	Jul 30	+4.0%p
Ottogi	Curry, ketchup, glass noodles, etc. (29 items)	+6~10%	Jul 16	+3~5%p
Nongshim	Cup ramen, snacks, beverages (43 brands)	+5.8%	Aug 1	+3.4%p
Coca-Cola Beverage	Convenience store beverages (52 items)	+7.2%	August	+4.2%p
Pulmuone	Dumplings, kimchi, etc. (30 items)	+6.7%	August	+3.9%p
Samlip	Mass-produced bread (about 50 items)	+9% range	September	+6.0%p
Dongwon F&B	Canned tuna, beverages	+9~10%	Sep 1	+6.0%p
Paldo	Cup ramen, 12 items (Wangttukkeong, Dosirak)	+5.5%	Sep 1	+3.7%p
Ottogi	Cup ramen (29 items), dumplings	+6.7~7.7%	Sep 7	+4.5%p
Haitai Confectionery	Oh Yes!, Home Run Ball, etc. (25 brands)	+7.8%	Oct 1	+5.9%p
Woongjin Foods	Morning Rice (Achimhaetsal), etc. (20+ items)	+7.0%	Oct 1	+5.3%p

Note: 2027 carry-over effect = increase rate × number of months not reflected in 2026 / 12 Source: Company data, press reports, Hanwha Research Center

Volume Stays Flat, Value Grows

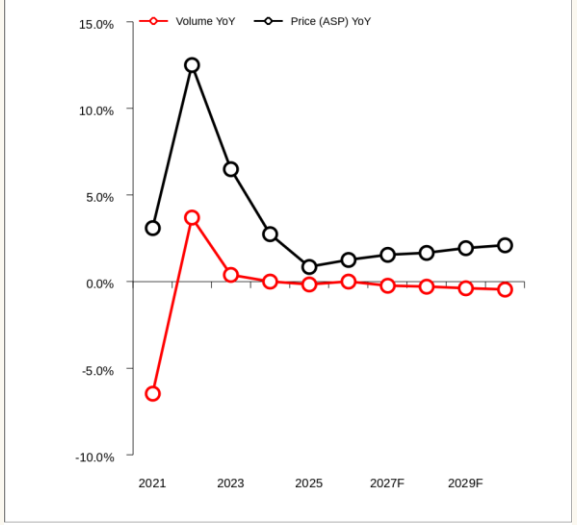

- The current price index is sales value tabulated at the prices of the time, and the constant price index is sales volume obtained by dividing the current price index by item price indices and fixing it at 2020 prices. The gap between the two explains the P effect
- The domestic food and beverage retail sales current price index went from 91.8 in 2019 → 116.8 in 2025 (+27.2%), and the constant price index from 95.6 → 93.4 (-2.3%). The processed food CPI of +7~8% in 2022~2023 was increases in a cost pass-through phase. It then stabilized at +1~2% and was +1.5% in January~August 2026
- The constant price index of food and beverage in January~August 2026 was +1.3%, turning positive for the first time in four years (+4.0% in August)
- For 2027, with 1) the full-year effect of price increases, 2) a larger premium share and 3) an improved channel mix, ASP is expected at +3%, and with dining-out CPI exceeding processed food, the shift from eating out to eating at home is expected to lift volume by +1% or more, so the domestic food and beverage retail sales current price index is forecast to expand to +4% or more

Cost Provides the Rationale for Price Increases

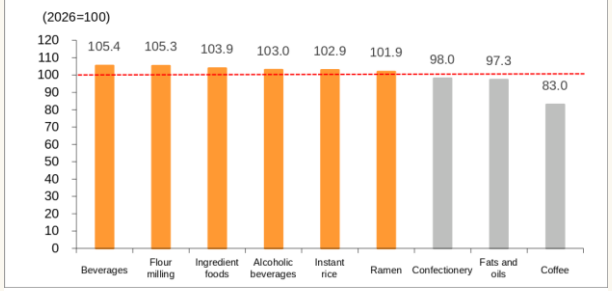

- 2027 costs are structured so that rising grain prices and a stronger won offset each other. Prices of wheat, soybean oil and others are up sharply from a year earlier, but the KRW/USD exchange rate fell to the 1,300 won level
- Assuming 1,350 won, the 2027 cost index (2026=100) is 105 for flour milling, 105 for beverages, 102 for ramen, 98 for confectionery and 83 for coffee, so upward price pressure is greatest for flour and sugar items
- The resumption of price increases in 2H 2026 is a result of this cost pressure. Because the justification lies in costs, we judge that additional increases in 1H 2027 are also likely
- With the sanctions over collusion in sugar, flour and starch sugar (fines of KRW 1.8 trillion), price asymmetry in oligopolistic B2B materials (fast to rise, slow to fall) has become a subject of monitoring, and the raw material bargaining power of processed food companies is expected to improve over the medium to long term

Major Grain Prices YoY

Summary of Sanctions for Collusion by Item (Fines by Company vs. Provisions) (Unit: KRW 100 million)

	Sugar	Flour	Starch Sugar	Total	Provision at End-2025
Announced Fines	4,083	6,710	7,476	18,269	
CJ CheilJedang	1,384	1,317	1,030	3,731	2,401
Daesang			2,341	2,341	3,753
Samyang Corp	1,303	948	2,103	4,354	

Source: Korea Fair Trade Commission, DART, Hanwha Research Center

Premiumization on Top of Price Increases

- The way food companies raised ASP during 2023 to 1H 2026, when price increases were difficult, was by launching high-priced new products
- In 4Q25, Shin Ramyun Gold and Samyang 1963 were launched at the same time, forming a premium bagged ramen line at 1,700~2,000 won
- Shin Ramyun Gold sold 10 million units within a month of launch, and Samyang 1963 sold 7 million
- The price per 100g of Shin Ramyun Gold is 1.4 times that of regular Shin Ramyun, and that of Samyang 1963 is 2.2 times that of Samyang Ramen
- The global premium ramen market is also expected to grow at a CAGR of +5.8%, from USD 11.1 billion in 2025 to USD 14.7 billion in 2030, exceeding the overall market growth rate (+4.7%)

One-Month Sales of Major Premium Ramen Launches

Health Is the Most Expensive Concept

- Representative examples of expanding the premium share by opening up new categories are protein foods and low-sugar product lines
- The domestic protein food market grew 3.7 times, from 120.6 billion KRW in 2019 to 450.0 billion KRW in 2024, and is forecast at 800.0 billion KRW in 2026E
- According to press reports, sales of Ottogi's low-sugar line "Light & Enjoy" grew more than 10% year on year, and the 2026 sales target for the related line is +30%
- Low-sugar ketchup is 1,200 won per 100g, 1.5 times regular tomato ketchup (827 won), and low-sugar oyster sauce (1,851 won) is priced even higher than premium oyster sauce (1,709 won), a structure in which sales grow even at the same volume

Reallocation of Food Spending

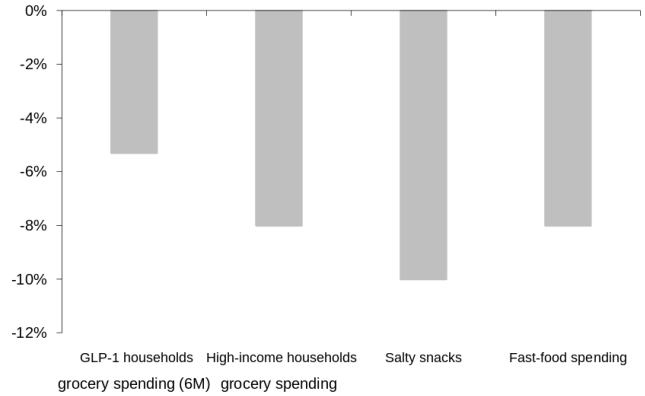

- Single-person households and aging are creating demand for small-portion, high-unit-price products, and GLP-1 is creating demand for premium products, so premium is not a passing fad but structural demand and will continue to show high growth
- Korea's single-person household share is 36.6% and the share of the population aged 65 or older is 20.7%, so demand for small portions and high unit prices is structurally expanding
- The share of U.S. adults currently taking GLP-1 rose from 3% in 2024 → 8% in 2025 → 11% in 2026 (Gallup, about 29 million people), or 1 in 10. With two oral GLP-1 drugs approved, the Wegovy pill in December 2025 and Foundayo in April 2026, the pace of adoption in 2027 is expected to quicken further
- We judge that the number of domestic users is still small but the direction is the same. In October 2026, the first domestically developed GLP-1 (Hanmi Pharmaceutical's Epe) was approved and launched at the end of October at a price lower than imported drugs, so 2027 is the year in which adoption also begins in Korea. "Reallocation," in which a volume headwind for snacks and sugar products and a tailwind for protein and functional products appear at the same time, is the key to category differentiation in 2027, and because spending shifts toward higher unit prices, it is favorable to ASP

Share of Single-Person Households in Korea (as of 2025)

Source: KOSIS, Hanwha Research Center

Change in Grocery Spending by U.S. GLP-1 Households by Category

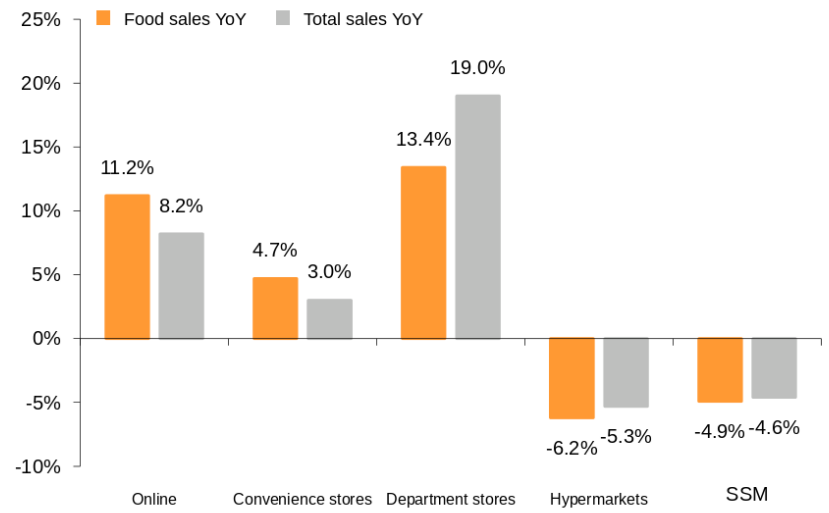

Source: Cornell University·Numerator, Hanwha Research Center

Channel Changes Also Favorable to ASP

- In January~August 2026, food sales rose +11.2% online, +4.7% at convenience stores and +13.4% at department stores, while hypermarkets fell -6.2% and SSMs -4.9%
- Online's share of retailer sales rose from 53.0% in 2022 to 59.7% in August 2026, while hypermarkets shrank from 13.0% to 9.0%
- Hypermarkets are a low-unit-price channel centered on large-volume packs and promotions, while convenience stores and online are high-unit-price channels centered on small packs, ready-to-eat products and premium products
- The change in channel composition itself is a structure that lifts food companies' realized ASP
- In 2027, too, channel mix is the third axis that lifts ASP separately from price increases and premiumization, and another axis of convenience store growth is foreigners

Sales Growth by Retail Format: Food vs. Total (Jan~Aug 2026)

Source: Ministry of Trade and Industry, Hanwha Research Center

Convenience Store Sales per Store

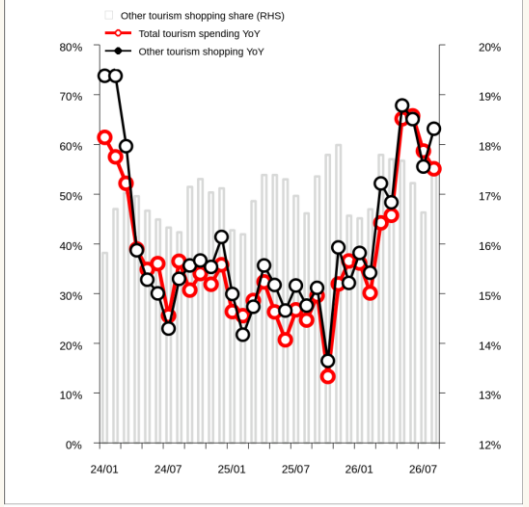

Source: Ministry of Trade and Industry, Hanwha Research Center

23 Million Foreign Visitors to Korea

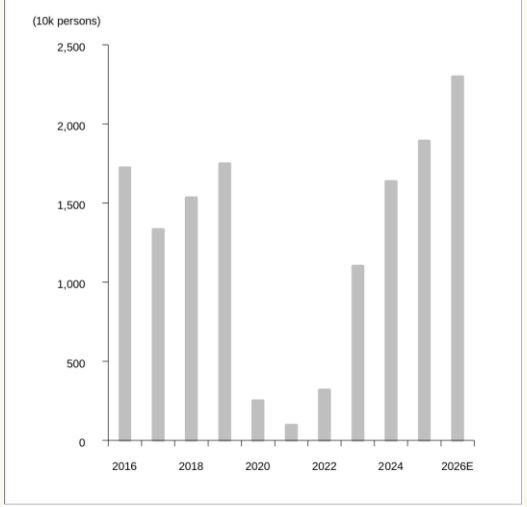

- Foreign visitors to Korea in 2026 are forecast at around 23 million (15.05 million in January~August, +21.6%). This is 1.3 times the 17.5 million of 2019 and equivalent to 45% of Korea's population. The 18.94 million of 2025 was already a record high
- Foreign consumption is rising even more steeply. Domestic spending by foreign-issued cards was 11.7 trillion KRW in 2025, 1.65 times that of 2019, and small retail spending, which includes convenience stores, supermarkets and souvenirs, was 2.0 trillion KRW, 2.14 times. Its share of total spending rose from 13.2% to 17.1%
- Foreign payment sales at the three convenience store chains grew 60~180% every year over 2023~2025 (CU in 2025 was 14 times its 2022 level). Foreigners' share of sales is still around 3%, but in a market where total convenience store sales are growing +1~5%, it accounts for a significant part of growth
- Convenience store experience consumption of K-food such as ramen, gim (seaweed snacks) and banana milk is domestic revenue and also a leading indicator of export demand after visitors return home. Inbound is one of the few net-new demand sources that fills the gap left by stagnant domestic volume, and we judge it to be the last pillar of 2027 domestic demand, adding volume on top of price and mix

Domestic Tourism Spending by Foreign Visitors to Korea

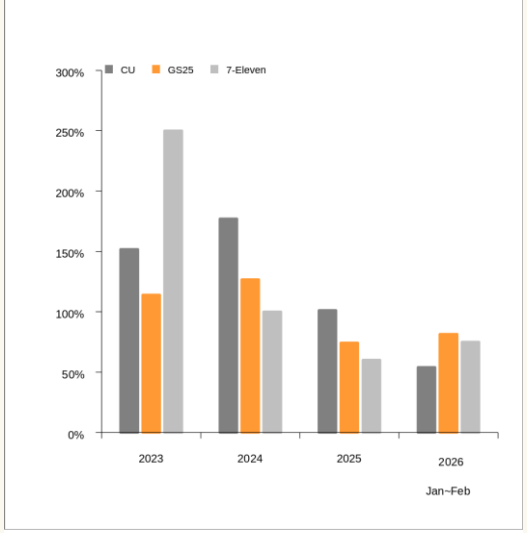

Note: Other tourism spending includes convenience stores, supermarkets and souvenirs.

III

Cosmetics

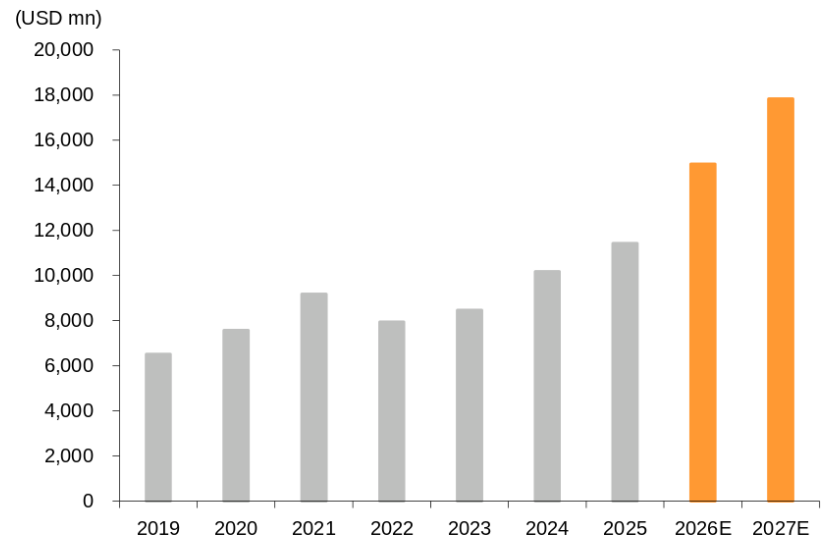

2027 Exports Forecast to Grow +19%

2027 Outlook: Food & Beverage / Cosmetics

Export Growth Accelerates

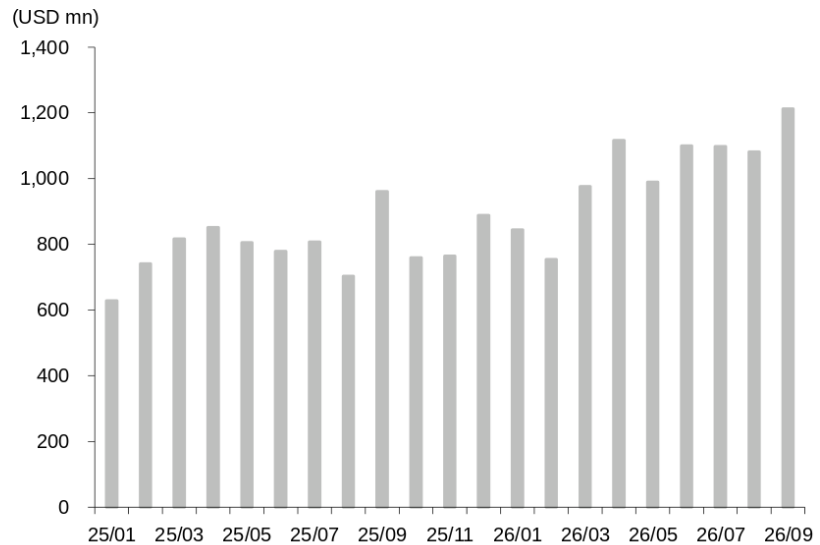

- Cosmetics exports in January~September 2026 were USD 11.14 billion (+30.8% YoY), nearly reaching full-year 2025 exports (USD 11.42 billion) in nine months. Surpassing USD 15 billion for the full year is within sight
- September exports were USD 1.51 billion (+31.4% YoY), a record monthly high (previous record: April, USD 1.35 billion). The pattern of a stronger second half than first half continues
- Growth continues for a fourth consecutive year after the 2022 contraction (-13.4%), and the growth rate re-accelerated from +20.3% in 2024 → +12.3% in 2025 → +31% in 2026
- 2027 exports are estimated at USD 17.8 billion (+19.3%) under the Base scenario

Cosmetics Exports by Year

Note: 2026E and 2027E are our estimates.
Source: Korea Customs Service, Hanwha Research Center

Cosmetics Exports by Month

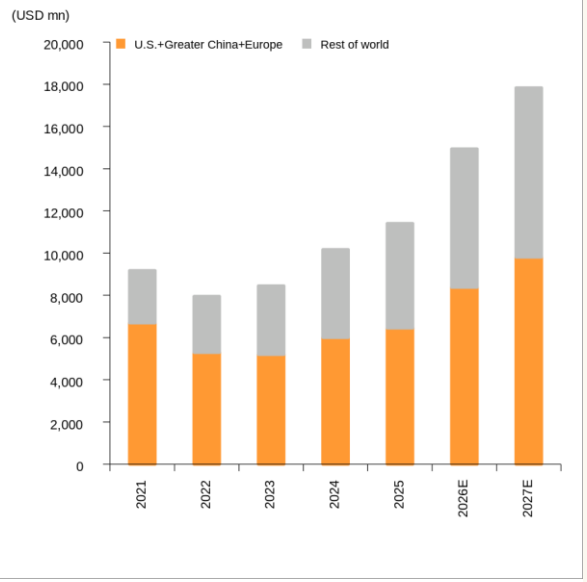

Source: Korea Customs Service, Hanwha Research Center

The Axis of Growth Diversifies

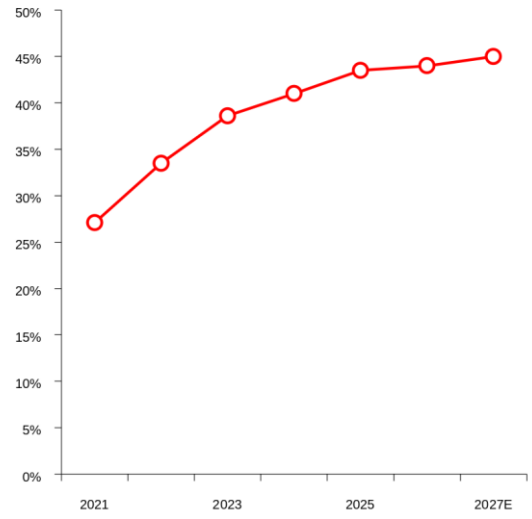

- The three major regions of the U.S., Greater China and Europe recorded a 2021~2025 CAGR of -0.9%. Over the same period, all other regions grew +18.9%
- The rest-of-world share expanded from 27.1% in 2021 to 43.5% in 2025 and is forecast to reach 45.0% in 2027
- The number of export destination countries also increased by 30 countries, from 172 in 2024 to 202 in 2025
- A structure that does not depend on any particular country is the biggest basis for the 2027 growth forecast

Exports to the Big Three Regions vs. Rest of World

Rest-of-World Share Trend

Source: Korea Customs Service, Hanwha Research Center

2026 YTD Export Growth by Region

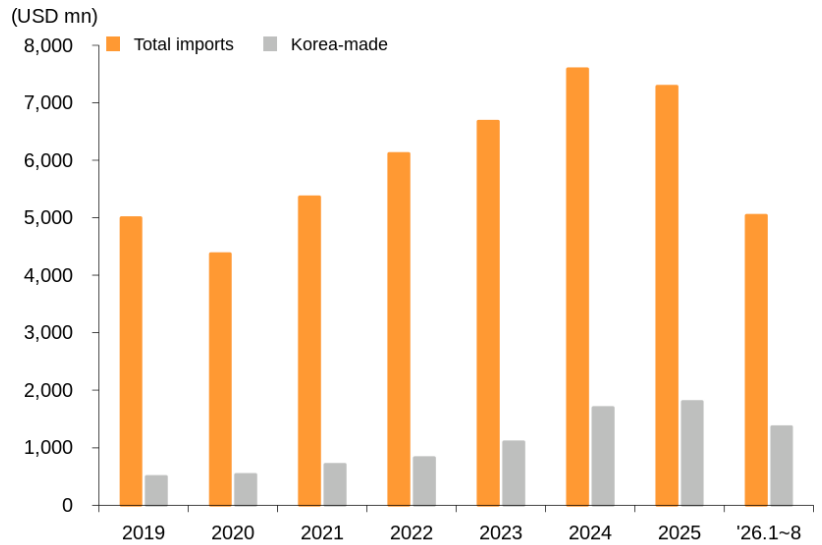

Source: Korea Customs Service, Hanwha Research Center

U.S. - Continued Share Gains

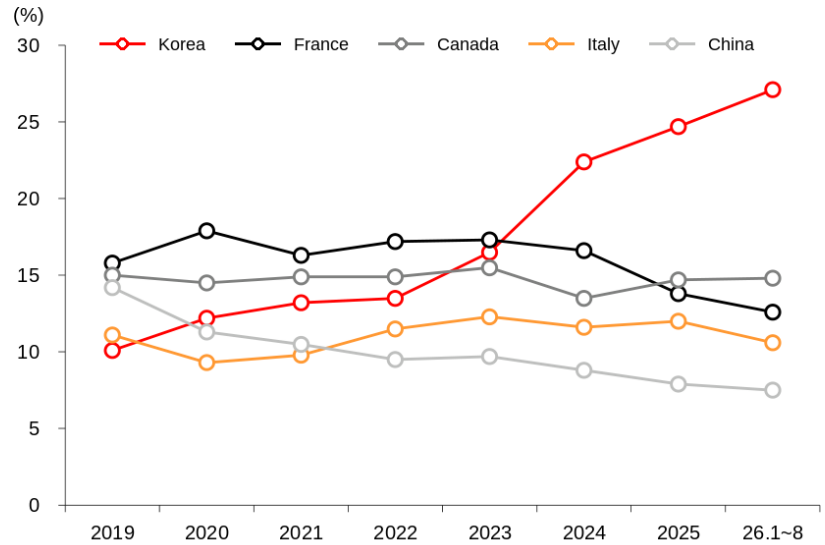

- The U.S. cosmetics import market shrank from USD 7.59 billion in 2024 to USD 7.29 billion in 2025, and grew only +2.4% in January~August 2026
- Over the same period, imports from Korea increased +17.2%, and Korea's share rose from 10.1% in 2019 → 22.4% in 2024 → 27.1% in January~August 2026. For reference, Korea's share of Japan's cosmetics import market is 45.9%
- Within the U.S. cosmetics import market, imports from Korea continue a steady uptrend, while France is -12.2%, Italy -10.6% and Japan -5.3%. It is a structure in which Korea takes the place of European and Japanese brands
- Growth is attributable to share gains, not a market boom. This structure is expected to continue in 2027

U.S. Import Market and Imports from Korea

Source: USA Trade Online, Hanwha Research Center

U.S. Import Market Share by Country

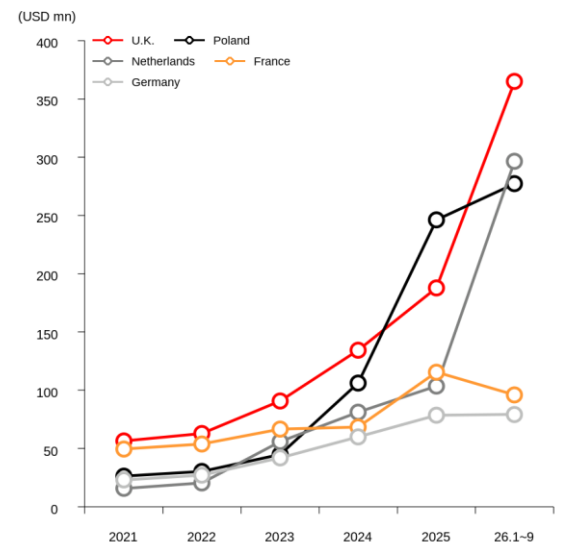

Source: USA Trade Online, Hanwha Research Center

Europe - Early Stage of Full-Scale Expansion

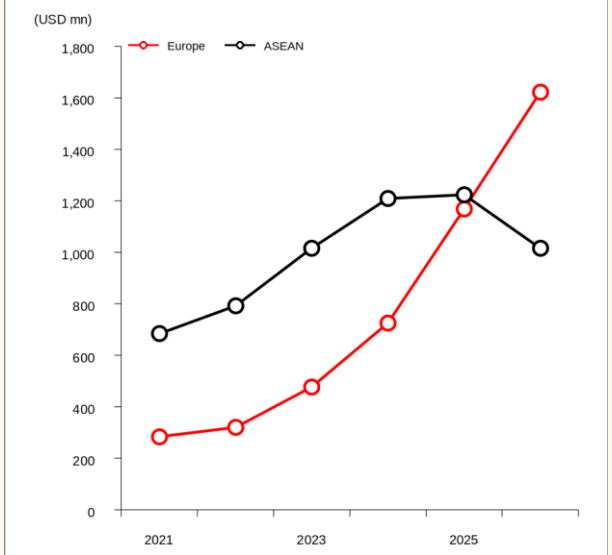

- Exports to Europe in January~September 2026 were +92.3%: the U.K. +171.7%, the Netherlands +302.7%, Estonia +208.4% and Poland +55.9%
- In 1H 2026, exports to six EU countries (USD 840 million) overtook those to seven ASEAN countries (USD 770 million) for the first time
- Poland and the Netherlands have strong characteristics as logistics and distribution hubs within Europe, so this is interpreted as a signal of building re-export infrastructure within Europe rather than final consumption
- The character of Europe is that the scale per country is small but the number of countries available for entry is large, so medium- to long-term growth potential is large

Exports to Major European Countries

Exports to Europe vs. ASEAN

Source: Korea Customs Service, Hanwha Research Center

High-Growth Export Destinations in 2026

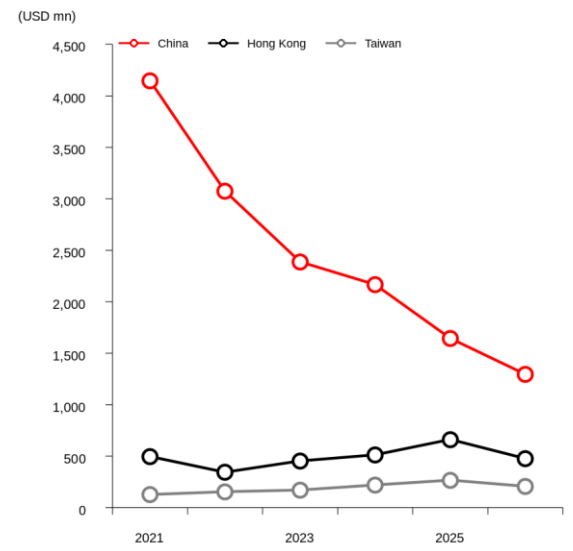

Source: Korea Customs Service, Hanwha Research Center

Greater China - Assuming 0%

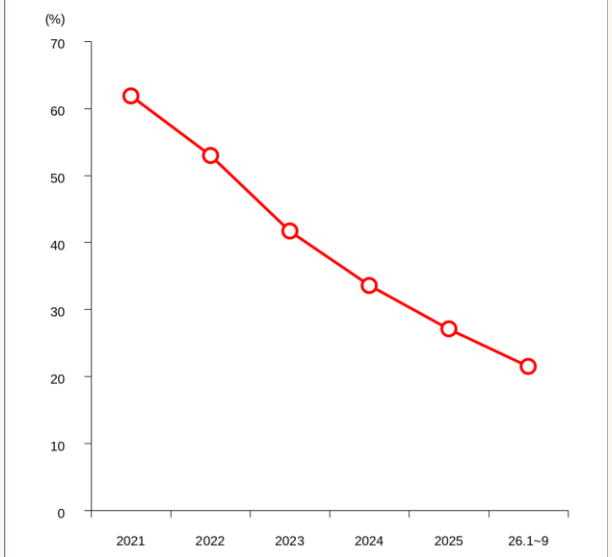

- Exports to Greater China were -0.4% in January~September 2026. The decline has stopped after -11.2% in 2025, but it is hard to call it a recovery
- China's cosmetics retail sales are recovering at +6.1% in January~August 2026, but with local brands' share approaching 70%, whether Korean brands reap the fruits of the market recovery is a separate matter
- In the 2027 forecast, Greater China is an option. Only a growth contribution of 0.4%p is reflected

Exports to Greater China by Country/Region

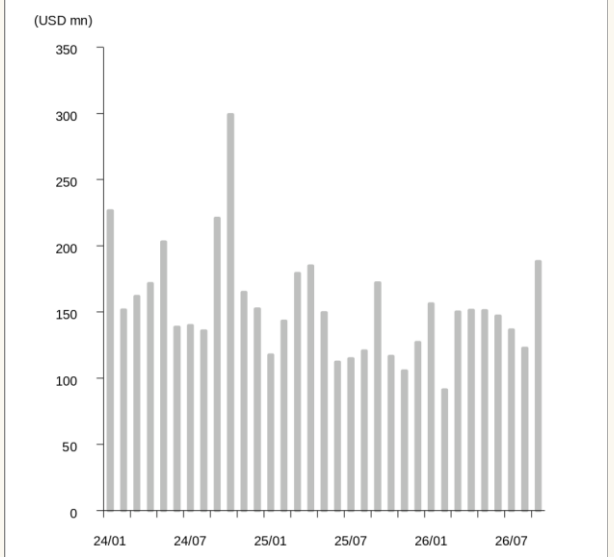

Source: Korea Customs Service, Hanwha Research Center

Greater China Share of Exports

Monthly Exports to China

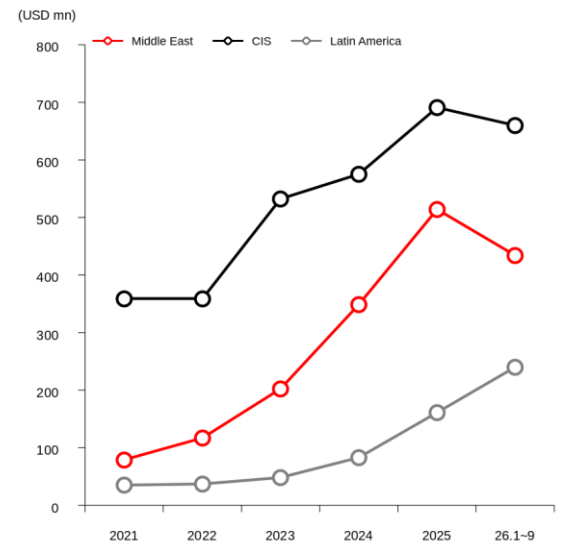

Source: Korea Customs Service, Hanwha Research Center

Others - The Year Their Presence Grows

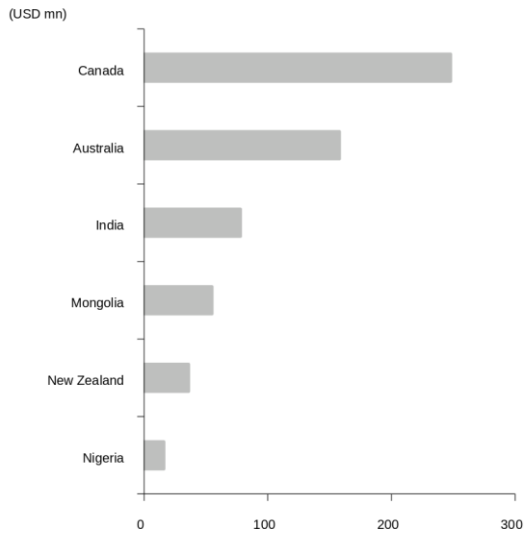

- Exports to Latin America in January~September 2026 were +111.3% (Brazil +105.3%, Mexico +71.3%), CIS +27.8% (Uzbekistan +135.5%) and the Middle East +23.5% (Türkiye +93.3%)
- Canada was +128.2%, with its scale expanding to USD 250 million
- The character of the other countries is that individual market sizes are small but the number of countries is large, so their combined contribution is large
- In 2027 growth contribution, the Middle East, CIS and Latin America combined are expected at 3.3%p, exceeding the U.S. (2.9%p)

Exports to the Middle East, CIS and Latin America

Major Countries in Other Regions

Source: Korea Customs Service, Hanwha Research Center

Number of Cosmetics Export Destination Countries

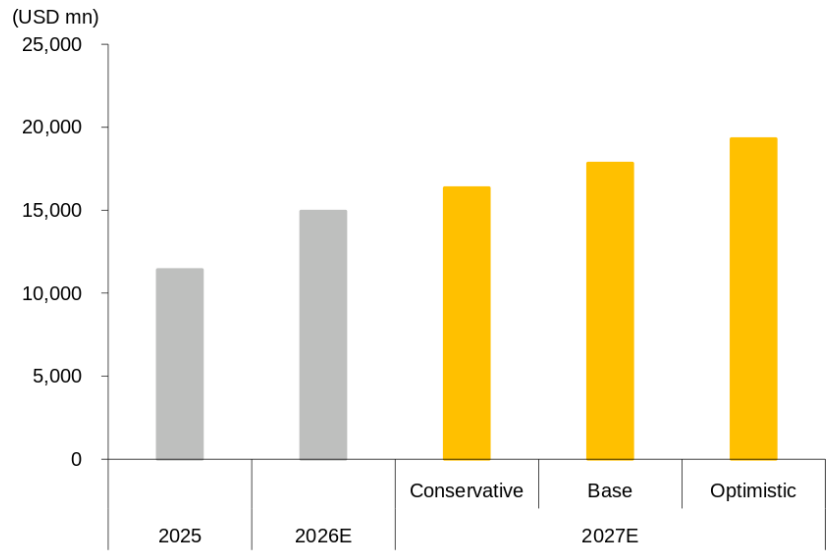

Source: MFDS, Ministry of Trade and Industry, Hanwha Research Center

2027 Export Outlook

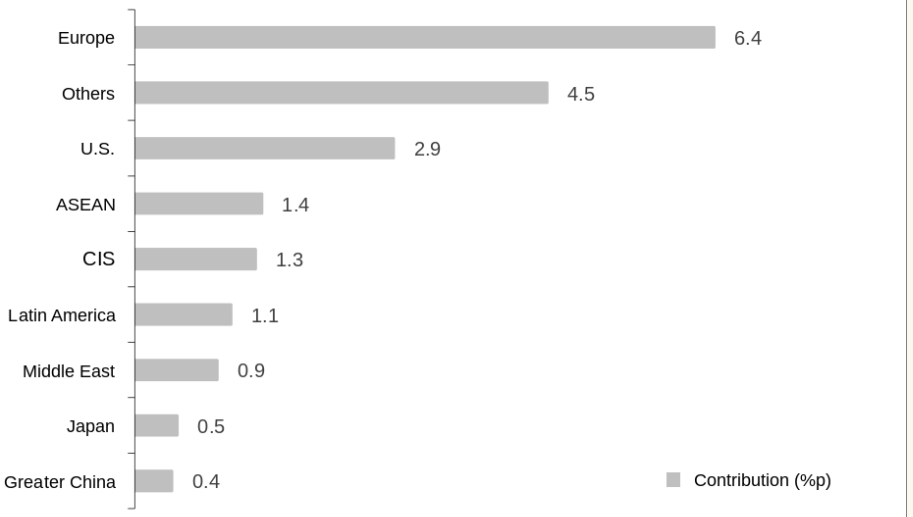

- 2027 cosmetics exports are estimated at USD 17.8 billion (+19.3%) in the Base scenario. Conservative: USD 16.4 billion (+9.4%); optimistic: USD 19.3 billion (+29.2%)
- Growth contribution is, in order, Europe 6.4%p, Others 4.5%p, the Middle East, CIS and Latin America 3.3%p, the U.S. 2.9%p and Greater China 0.4%p
- 19% growth is possible even if Greater China exports stay at the prior-year level, and even the U.S. accounts for only 15% of the growth contribution
- For the U.S., the Base scenario is set conservatively at +14%, reflecting the stagnation of the import market and the pace of share gains (+2.3%p a year)

2027 Cosmetics Export Scenarios

2027 Growth Contribution by Region

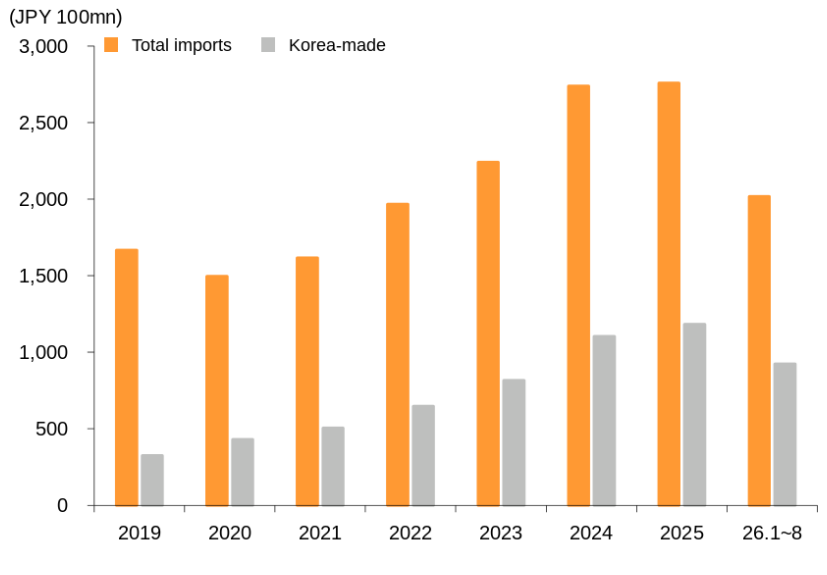

Source: Hanwha Research Center

Growth Continuing Despite Intensifying Competition (1)

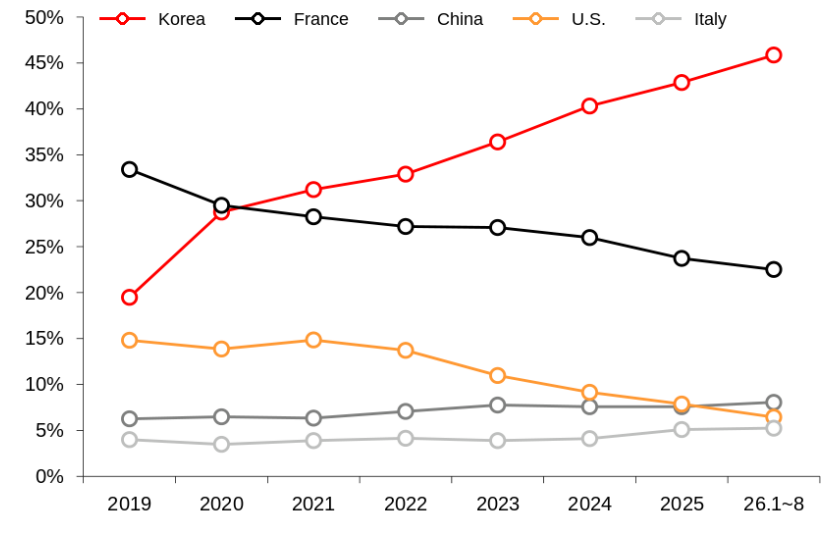

- As the cosmetics export boom continues over a long period, competition is also becoming increasingly intense
- Japan is a market that can be interpreted as a precedent in which total exports grow but the growth of individual companies is dispersed
- Korea's share of Japan's cosmetics import market reaches 45.9%
- With growth slowing from 2025, Japan's share of total exports shrank to 9.7% in 2024, 9.3% in 2025 and 7.9% cumulatively in January~September 2026

Japan Import Market and Imports from Korea

Source: Japan Trade Statistics, Hanwha Research Center

Japan Import Market Share by Country

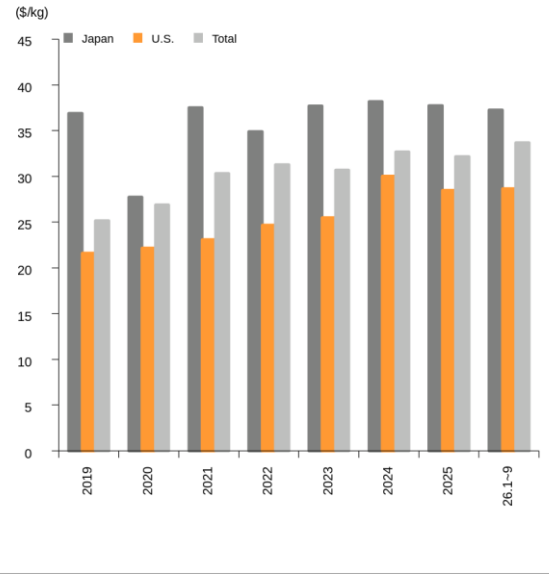

Source: Japan Trade Statistics, Hanwha Research Center

Growth Continuing Despite Intensifying Competition (2)

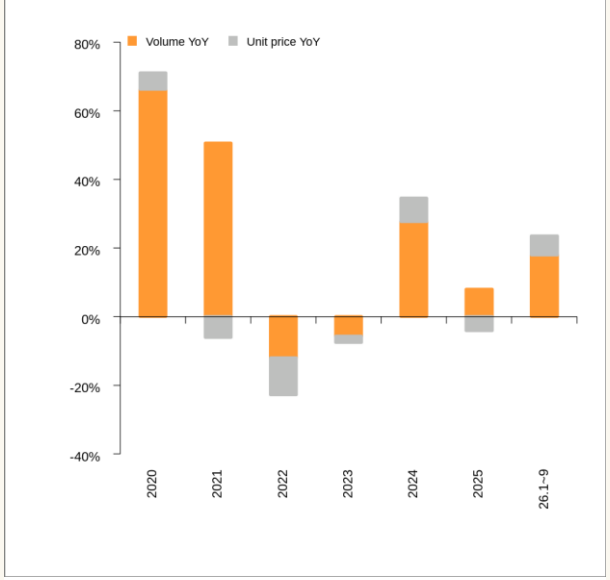

- The cosmetics export unit price to Japan declined gradually after peaking in 2024 ($38.2), to $37.3 on a cumulative January~September 2026 basis. The cosmetics export unit price to the U.S. also declined gradually after peaking in 2024 ($30.0), to $28.7 on a cumulative January~September 2026 basis
- The decline in export unit prices could be interpreted as an early sign of overcrowded competition, but the situation of exports to Japan and that of exports to the U.S. are different
- Considering 1) the possibility that the imposition of tariffs on exports to the U.S. in 2026 led to the fall in export unit prices, 2) that for cosmetics exports to Japan, which depend heavily on color cosmetics, the fall in color cosmetics export unit prices led the decline in the overall export unit price, 3) that skincare export unit prices to both Japan and the U.S. remain at past peak levels, and 4) that the uptrend in skincare export volume to both Japan and the U.S. is solid, it is appropriate to judge that intensifying competition and overcrowding are not signals of a peak-out but an issue that will remain unresolved within a continuing boom

IV

Cosmetics

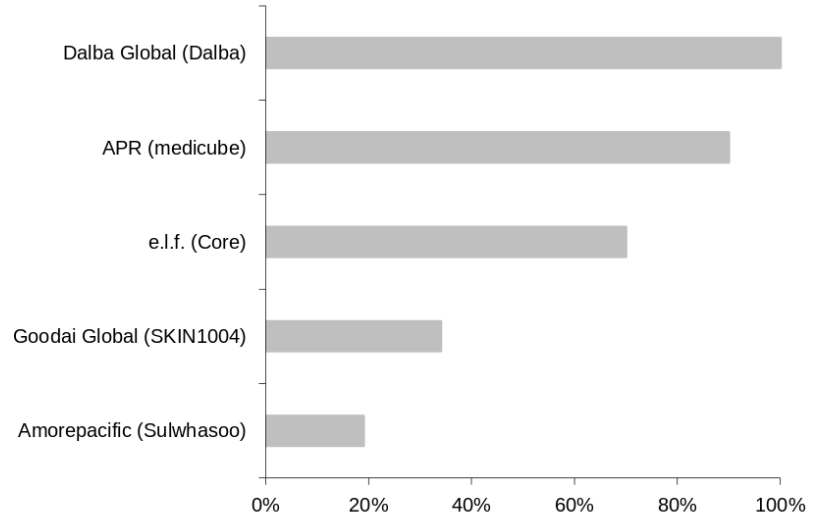

Different Direction, Different Valuation

2027 Outlook: Food & Beverage / Cosmetics

Different, Not Wrong

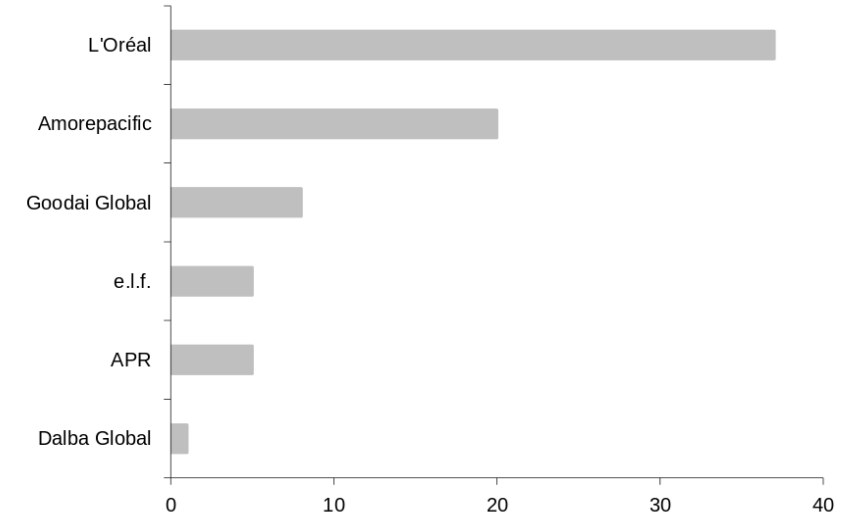

- While the share of Korean cosmetics in overseas markets expands, brand companies' responses are diverging in two directions
- One-brand companies that dig deep into one, and multi-brand companies that take on many broadly
- One-brand companies include APR, Dalba Global and e.l.f.
- Multi-brand companies include Goodai Global, Amorepacific and L'Oréal
- The two strategies are not a matter of superiority but a matter of differing required capabilities and types of risk

Share of Flagship Brand in Sales

Source: DART, Company data, Hanwha Research Center

Number of Brands Owned by Major Brand Companies

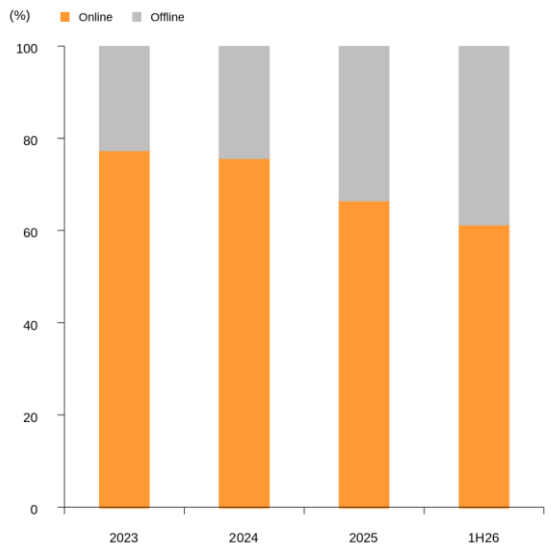

Source: Press reports, Hanwha Research Center

One Brand - Expansion of Countries, Categories and Channels

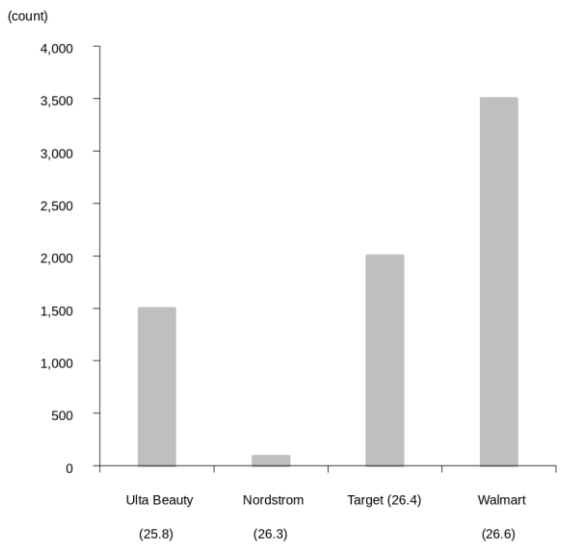

- APR operates skincare and beauty devices together under a single medicube brand and is expanding into hair and body
- No. 1 in revenue among Korean cosmetics single-brand companies
- It started centered on Amazon in the U.S., but is broadening its base to about 7,000 or more stores, including 1,400+ Ulta, 2,000+ Target, 3,000+ Walmart and 90 Nordstrom
- Online share fell from 75.8% in 2024 to 61.4% in 1H 2026, while offline rose from 24.2% to 38.6%

Online vs. Offline Sales Mix

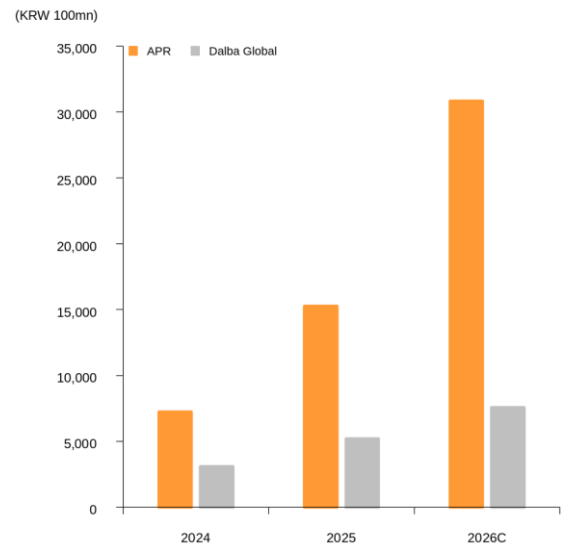

Source: DART, Hanwha Research Center

U.S. Offline Store Listings

Source: Press reports, Hanwha Research Center

Sales of the Two One-Brand Companies

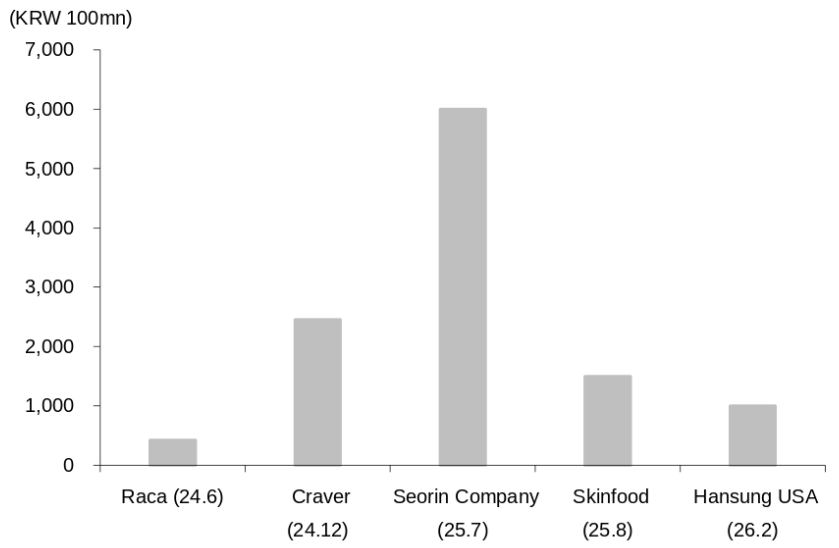

Source: DART, Company data, Hanwha Research Center

Multi-Brand - Spreading Brands to Diversify the Portfolio

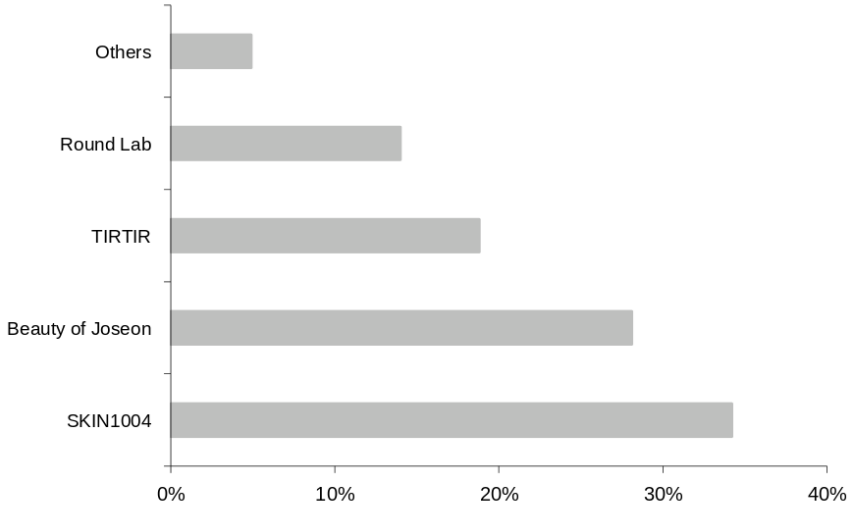

- Goodai Global started in 2015 as a small cosmetics distributor, took charge of exclusive distribution of Beauty of Joseon in 2017, and in 2019 acquired Beauty of Joseon outright, converting to a brand operator
- It subsequently converted to a multi-brand company by acquiring TIRTIR, SKIN1004, Round Lab, Skinfood and others through M&A
- The brands it currently officially owns are eight: Beauty of Joseon, TIRTIR, SKIN1004, Round Lab, Skinfood, House of Hur, IUNIK and Dr. Nineteen
- According to press reports, the shares by brand are SKIN1004 34.2%, Beauty of Joseon 28.1%, TIRTIR 18.8% and Round Lab 14.0%
- 2025 consolidated revenue was 1,471.8 billion KRW (+294%) and operating profit was 273.4 billion KRW (+98%, OPM 18.6%)

Major Acquisition Amounts of Goodai Global

Source: Press reports, Hanwha Research Center

Goodai Sales Mix by Brand

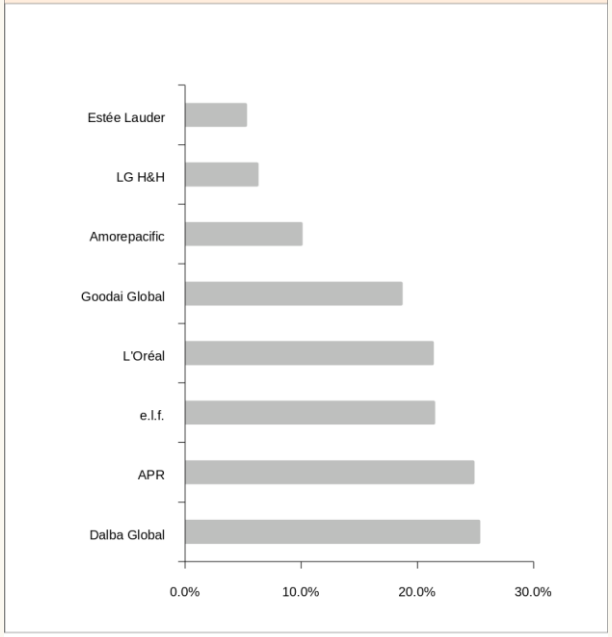

Source: Press reports, Hanwha Research Center

Different Margins, Different Reasons

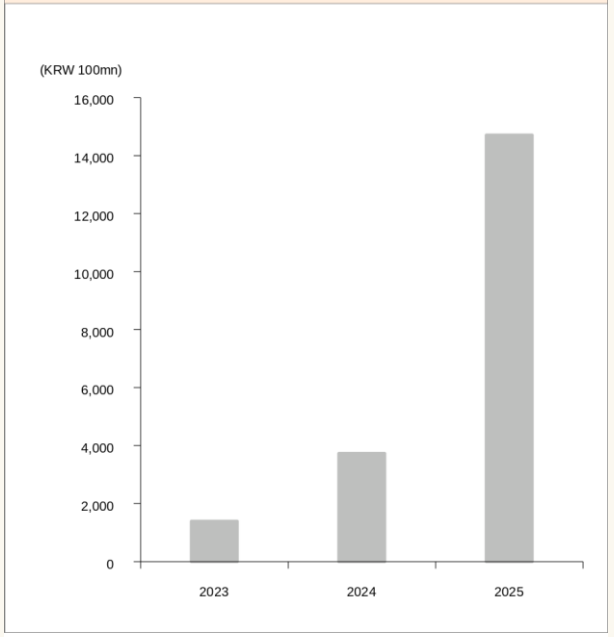

- Based on the latest filings, brand companies' operating margins are Dalba 25.3% (2Q26) and APR 24.8% (2Q26) vs. Goodai Global 18.6% (2025), Amorepacific 10.0% (2Q26), LG H&H 6.2% (2Q26) and Estée Lauder 5.2% (FY26)
- L'Oréal (21.3%) is the only multi-brand company that earns a one-brand-level margin, and one-brand companies are generally recording higher margins than multi-brand companies

Operating Margin of Brand Companies Based on Latest Filings

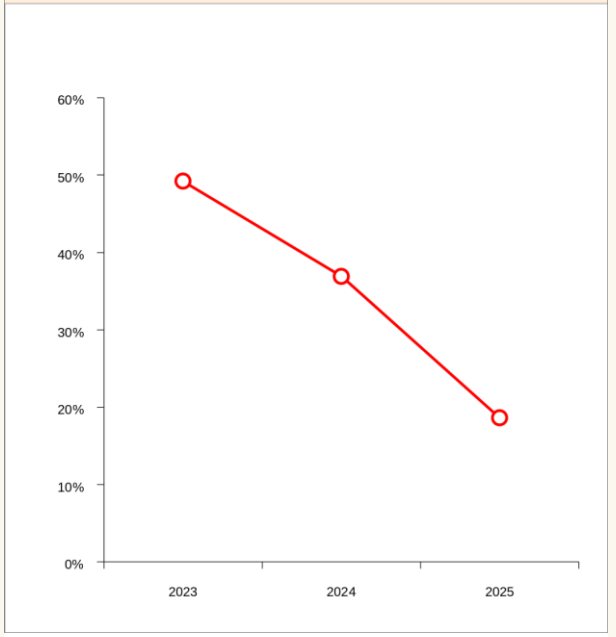

Note: Estée Lauder is FY26, Goodai Global is full-year 2025 and L'Oréal is 1H26.
Source: DART, Company data, Hanwha Research Center

Goodai Global Sales

Goodai Global Operating Margin Trend

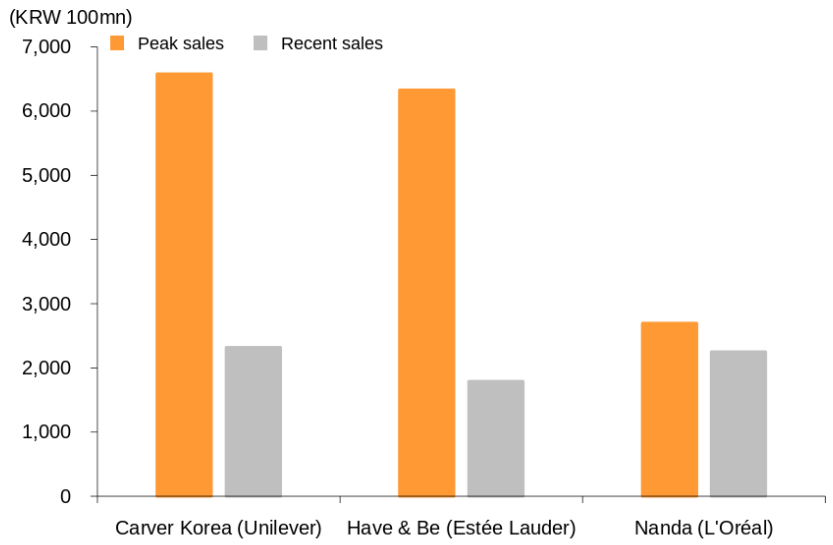

Source: DART, Hanwha Research Center

The Difficulty of Multi-Brand

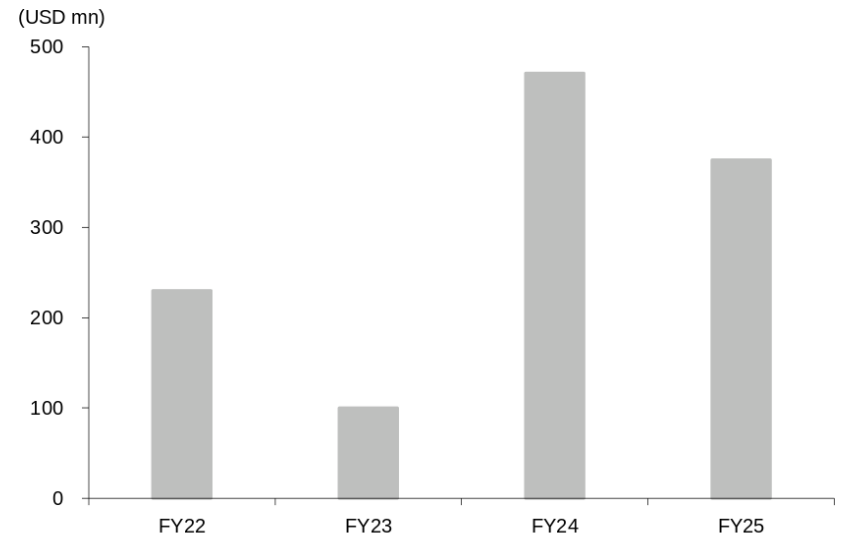

- All three Korean brands acquired by global majors fell sharply from their peaks: Carver Korea -65%, Have & Be -72% and Nanda -17%
- Estée Lauder recognized cumulative impairment losses of USD 1.18 billion related to Have & Be (Dr. Jart+). It pursued a sale but has now decided to keep it in its portfolio
- The common causes cited are delayed decision-making driven by headquarters and a loss of local agility
- It is evidence that post-acquisition operation is a separate capability, rather than that the multi-brand strategy is wrong

Sales of Korean Brands Acquired by Global Companies

Source: DART, Company data, Hanwha Research Center

Dr. Jart+ Impairment Loss

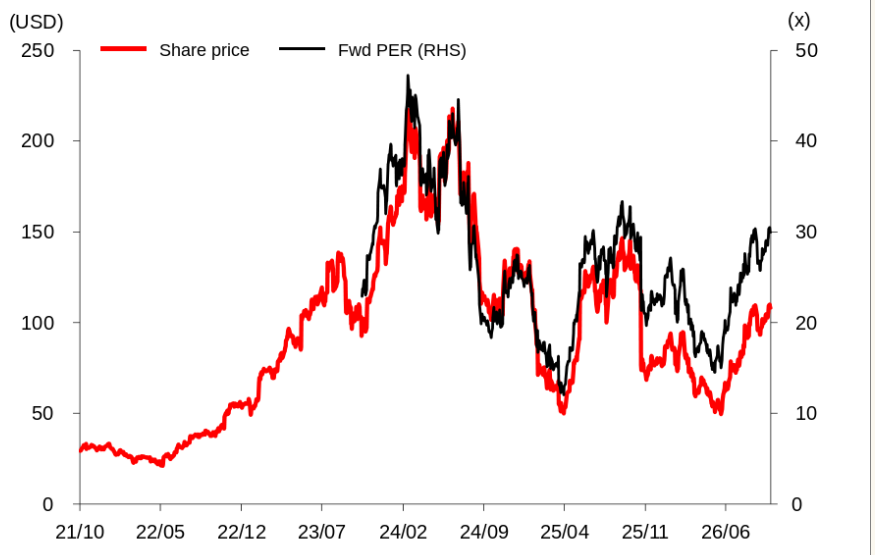

Source: Estée Lauder, Press reports, Hanwha Research Center

The Difficulty of One Brand

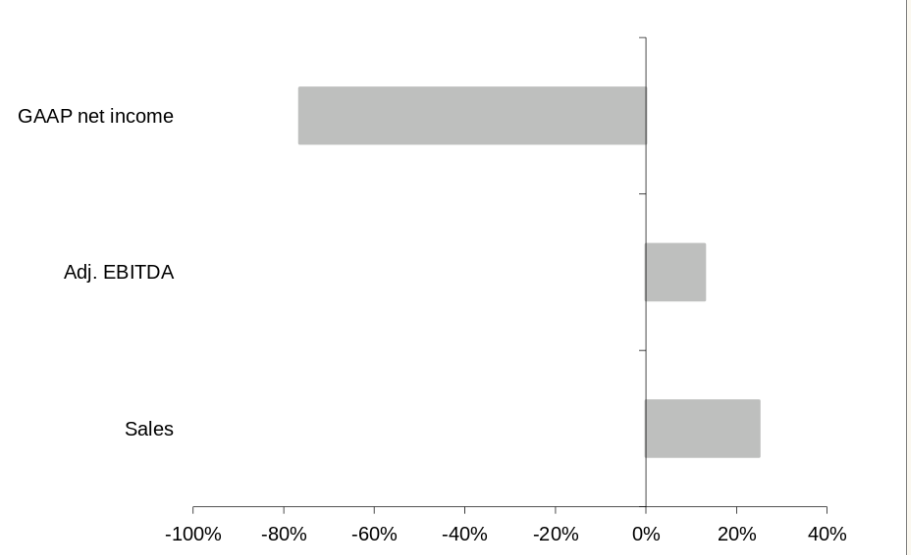

- e.l.f.'s FY27 1Q (April~June 2026) revenue grew at a high +36%, but
- excluding rhode, whose acquisition was announced in May 2025 and closed in August, revenue of the existing business declined by a high single-digit percentage
- The share price is -50% from its June 2024 peak
- One-brand companies can post high growth well above the market growth rate while the brand is in its growth phase, but the moment the brand enters maturity, the void becomes plainly apparent

e.l.f. Beauty Recent Share Price and Forward PER

Source: Bloomberg, Hanwha Research Center

e.l.f. FY26 Results Growth Rates

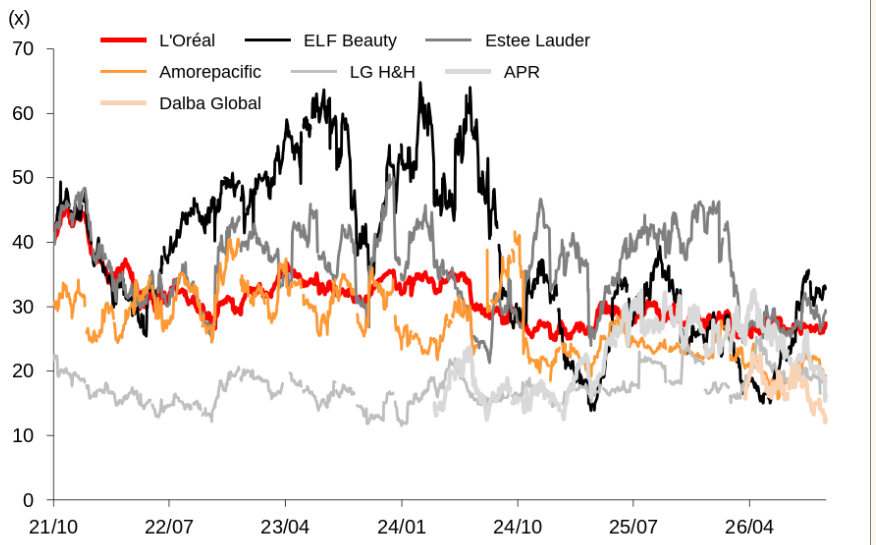

Source: e.l.f. Beauty, Hanwha Research Center

Different Valuation

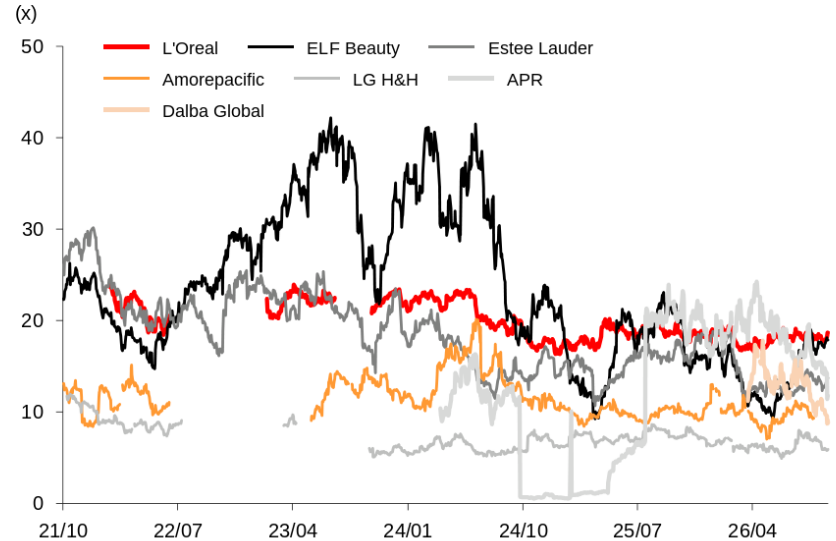

- 12M Fwd PER is 32.9x for e.l.f., 29.4x for Estée Lauder and 27.4x for L'Oréal
- By contrast, EV/EBITDA is 17.9x for e.l.f. and 13.7x for Estée Lauder
- Currently, e.l.f. receives a premium of 12~20% over L'Oréal and Estée Lauder on 12M Fwd PER, and the premium over Estée Lauder on EV/EBITDA is about 31%. However, the duration of the premium is not guaranteed

Samyang Round Square (+7)	**45.0%**
National Pension Service (+1)	**11.2%**

2027 Revenue 3,955.2bn KRW (+28.1%), 2028 Revenue 4,754.3bn KRW (+20.2%)

- The new Jiaxing plant in China, scheduled to start operation in 1Q27, is expected to complete ramp-up in August on a monthly basis and in 4Q on a quarterly basis on a two-shift basis. 2027 average utilization is estimated at 50%
- After the completion of the new Jiaxing plant in China, production for the U.S. and Europe in Korea is expected to expand
- The U.S. share of sales volume is forecast to expand from 17% in 2025 → 20% in 2026 → 25% in 2027, and the Europe share of sales volume from 5% in 2025 → 8% in 2026 → 12% in 2027

New Plant Decision Within 2026, Second China Plant Under Consideration

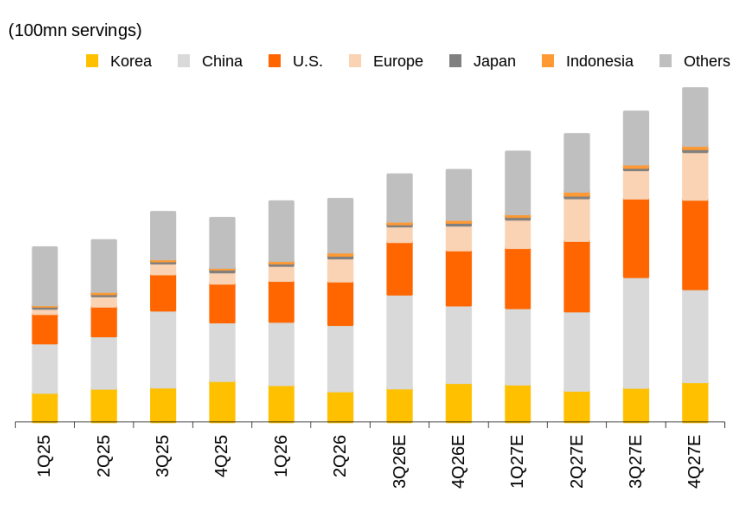

- The new Jiaxing plant in China is expected to exceed 100% utilization in 2028, and the Korean plants are expected to exceed 100% utilization in 2029 even with China production transferred to the new Jiaxing plant
- Because a supply shortage in 2029 is unavoidable, a decision on new overseas plants is expected to be made within 2026
- Because the production shortfall in 2029 is substantial on current estimates, it is highly likely that the new Jiaxing plant in China will move to a three-shift system from 2H 2028
- Beyond the new Jiaxing plant in China, additional plant investment within China as well as new overseas plants is likely to be considered

KRW bn, KRW, x, %	2024	2025	2026E	2027E	2028E
Revenue	1,728	2,352	3,087	3,955	4,754
Operating Profit	345	524	722	919	1,128

EPS	36,106	52,217	75,960	92,932	114,534
Net Debt	36	154	-145	-555	-1,156
PER	34.6	23.9	16.5	13.5	10.9
PBR	11.5	7.5	5.2	3.9	2.9
EV/EBITDA	24.2	16.3	11.5	8.8	6.8
Dividend Yield (%)	0.3	0.4	0.6	0.7	0.9
ROE	39.4	37.6	37.2	32.8	30.3

Key Assumptions for Earnings Estimates

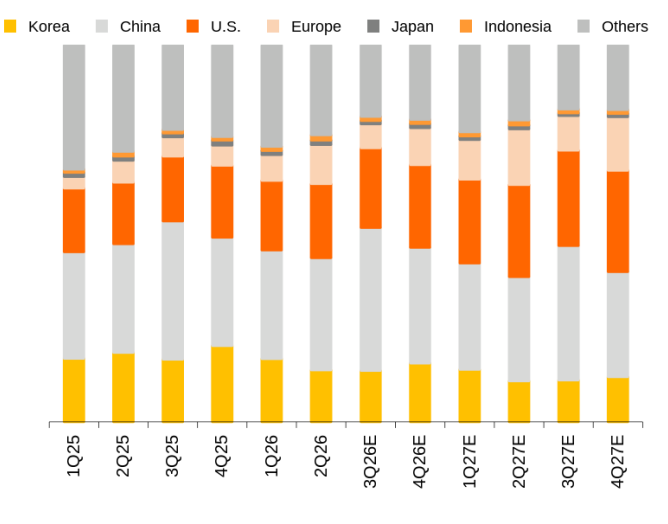

- Assumes 2027 KRW/USD of 1,350 won (-6.0%), KRW/CNY of 200 won (-4.8%) and KRW/EUR of 1,539 won (-5.3%)
- The utilization of the new Jiaxing plant in China is estimated at 20% in 1Q27 → 40% in 2Q27 → 60% in 3Q27 → 80% in 4Q27, for a 2027 average utilization of 50%
- 2027 is a ramp-up period, so the share of production and supply from Korea to China is estimated at 40.8% and the share of China's own production at 59.2%
- 2027 sales volume by region is estimated at Korea +2.0%, China +19.4%, the U.S. +55.2% and Europe +87.5%
  - Korea's share of sales volume shrinks from 18% in 2025 → 15% in 2026 → 12% in 2027
  - China's share of sales volume shrinks from 31% in 2025 → 32% in 2026 → 30% in 2027
  - The U.S. share of sales volume expands from 17% in 2025 → 20% in 2026 → 25% in 2027
  - The Europe share of sales volume is forecast to expand from 5% in 2025 → 8% in 2026 → 12% in 2027

Samyang Foods Sales Volume Estimates by Region

Source: Hanwha Research Center

Samyang Foods Sales Volume Mix Estimates by Region

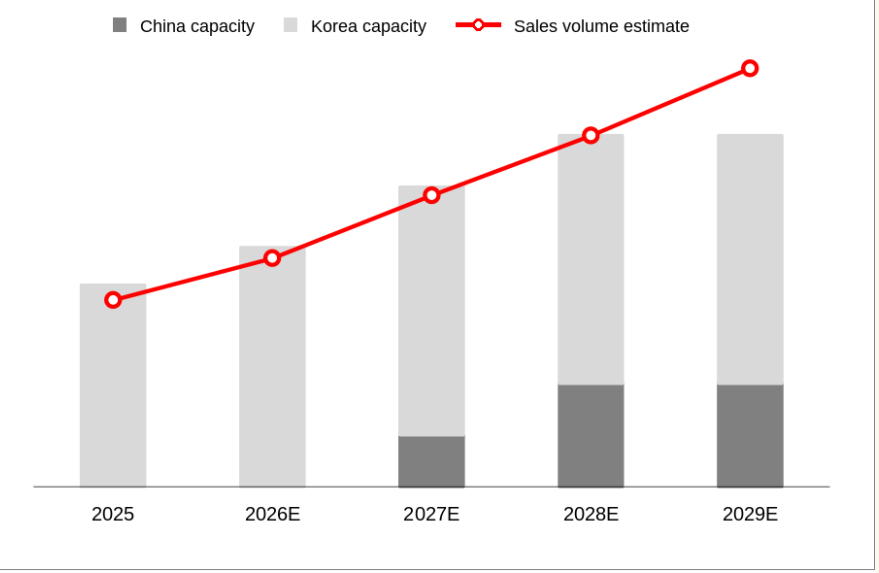

Source: Hanwha Research Center

Utilization Exceeds 100% in China in 2028 and in Korea in 2029

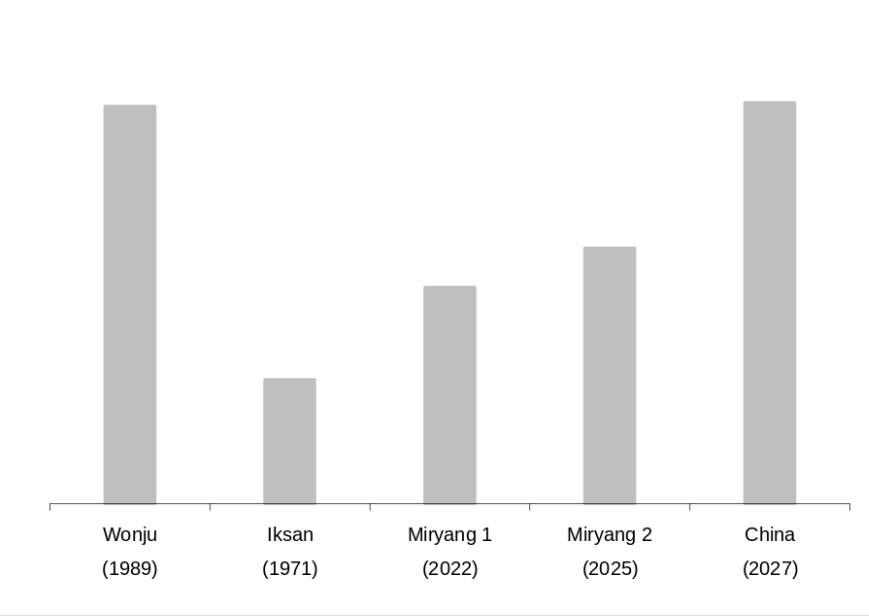

- Even with the new Jiaxing plant in China starting operation in 1Q27, Korean utilization in 2027 is expected to reach 96.5%
- Assuming 2028 sales volume growth rates of China +20%, the U.S. +30% and Europe +45%, and 2029 sales volume growth rates of China +20%, the U.S. +25% and Europe +35%, the new Jiaxing plant in China is expected to exceed 100% utilization in 2028, and the Korean plants to exceed 100% utilization in 2029 even with China production transferred to the new Jiaxing plant
- Because a supply shortage in 2029 is unavoidable, a decision on new overseas plants is expected to be made within 2026
- Because the production shortfall in 2029 is substantial on current estimates, it is highly likely that the new Jiaxing plant in China will move to a three-shift system from 2H 2028, and additional plant investment within China as well as new overseas plants is likely to be considered

Cosmax BTI (+11)	**27.5%**
National Pension Service (+1)	**12.9%**
Norges Bank (+1)	**6.1%**

2027 Revenue 3,810.6bn KRW (+20.8%), 2028 Revenue 4,437.6bn KRW (+16.5%)

- 1H 2026 consolidated revenue was +21.8% YoY, below the overall export growth rate of +29.6% YoY, but 2H is expected to be +41.3% YoY, well above the overall export growth rate
- 2027 consolidated revenue is estimated to grow +20.8% YoY, and the revenue growth of the Korean entity (+19.5% YoY) is conservatively assumed at about the level of the overall export growth rate
- Profit growth (+25.7% YoY) is expected to exceed revenue growth (+20.8% YoY) on productivity improvement in low-margin products, a return to growth in color cosmetics orders and a larger share of large orders

BUY Maintained, Target Price Raised to 370,000 KRW (+23%)

- The target price was raised on the change in the target price base year (12M Fwd → 2027) and upward revisions to earnings estimates
- The CAGR of revenue over 2023~2028E is expected to reach +20.1%
- It is expected that not only the growth of the Korean entity but also the high growth of overseas subsidiaries in China, the U.S. and Southeast Asia will drive the growth in overall earnings and the valuation re-rating

Investment Ratings

Stock Investment Ratings

- 'Buy' is assigned if expected absolute return is over +15% for the next year.
- 'Hold' for -15% to +15%; 'Sell' if less than -15%.
- Evaluation and change cycles depend on industries/stocks and the analyst's estimates.

Industry Investment Ratings

- 'Positive' if sector expected to outperform historic returns over next year.
- 'Neutral' if sector expected to match past returns.
- 'Negative' if underperformance is expected.
- Based on analyst's comprehensive judgment.

Distribution of Investment Ratings in Our Research Reports (as of September 30, 2026)

Rating	Buy	Neutral	Sell	Total
Share of financial investment products	96.4%	3.6%	0.0%	100.0%
